

**California Transportation Commission**  
**2018 Solutions for Congested Corridors Program**  
**Staff Recommendations**

The Solutions for Congested Corridors Program (Congested Corridors Program), created by Senate Bill (SB) 1 (Beall, Chapter 5, Statutes of 2017), provides \$250 million annually to fund projects designed to reduce congestion in highly traveled and highly congested corridors through performance improvements that balance transportation improvements, community impacts, and that provide environmental benefits.

In June 2017, the California Transportation Commission (Commission) initiated the process to implement the Congested Corridors Program by developing the Congested Corridors Program Guidelines (guidelines). The Commission held five public workshops and two public hearings to consult and seek input from stakeholders representing state agencies, including the California Air Resources Board, regional transportation planning agencies, local governments, private industry, and other advocates. Thirty days prior to adoption, the Commission provided the proposed guidelines to the Joint Legislative Budget Committee and the transportation policy committees in the Senate and Assembly. The Commission's guidelines, adopted in December 2017, describe the policy, standards, criteria and procedures for the development and management of the initial Congested Corridors Program funding cycle.

The Commission established the initial funding cycle as a 4-year, \$1 billion program. Project nominations were due to the Commission on, or postmarked by, February 16, 2018. The Commission received 32 project nominations seeking over \$2.5 billion in funding. The projects nominated and the funding requested reflects the great need for projects to address congestion across the state. Since SB 1 provides an on-going funding source for the Congested Corridors Program, agencies will have the opportunity to apply for funding in subsequent cycles.

An evaluation team, consisting of Commission and Caltrans staff, utilized the criteria set forth in the Commission's adopted guidelines to evaluate the information presented in each project nomination. Due to the competitive nature of the program, staff evaluations were limited to the documentation submitted with the application package.

Recommendations for funding are set forth on the attached list of projects. The recommended projects were determined to be the projects that best address the criteria as outlined in the guidelines. Staff recommends Congested Corridor Program funds totaling \$1.006 billion for nine projects valued at approximately \$3.5 billion. The recommendations include projects that provide a variety of multimodal transportation improvements in highly traveled and highly congested corridors. Recommendations include, but are not limited to, projects that will provide for transit stations, tracks for passenger and commuter rail, high occupancy vehicle and express lanes, active transportation improvements, transportation management systems, bus purchases, and local road improvements. These projects will reduce congestion in highly traveled corridors, have positive environmental impacts and provide benefits to communities throughout California.

Projects not recommended for funding were determined to be less competitive for a variety of reasons including, but not limited to: lower priority of the nominating agency; required information missing or unclear; non-compliance with guidelines and/or statutory requirements; or projects recommended for funding in other SB1 programs. The projects not recommended for funding are, by and large, worthy projects though not as competitive for this first program cycle.

The Commission will consider staff recommendations and adoption at the Commission's May 16-17, 2018 meeting in San Diego, California.
