Video inspection of the drainage system at this location showed two 160-foot long High Density Polyethylene (HDPE) drains collapsed and blocked. This area experienced a major landslide in 2011 causing one million cubic yards of soil and debris to fully close the highway. The damage to the two drain pipes is suspected to have been caused by earth movement during construction. This project is to replace the two damaged pipes before the upcoming winter season in order to prevent potential damage to the buttress wall supporting the roadway slope. During the month of May 2013, the Fire Life Safety/Building Management System (FLS) was tested and showed several failures and deficiencies affecting warning strobes, fire doors, audio alarm systems, fan systems, fireman’s plug-in phone system and override keys to control elevator cars, emergency phones in stairwells, and fire alarm activation. The State Fire Marshal issued a Fire Safety Correction Notice to the Department on June 10, 2013 and placed the building under a 24-hour fire watch until the FLS system is replaced or repaired and is in compliance with federal standards. This project is to replace the FLS malfunctioning system as soon as possible to avoid closure of the District office building and the disruption that it can cause to the management and operation of the State Highway System throughout the San Francisco Bay Area. Initial allocation was to place guardrail to protect the roadway from post-fire falling rocks and debris flows, protect drainage system, replace damaged roadway signs, replace damaged highway fencing, and repair wire mesh and cable anchored covered hillside. This supplemental allocation is largely due to discovering more than anticipated heat damage to the rockfall wire mesh and its upper cable anchor system than was originally estimated, and additional cost of material disposal at coastal commission disposal site.
