1 \$350,000 Humboldt 01U-Hum-169 28.3/28.6	Near Weitchpec, 0.1 mile west of Rube Ranch Creek Bridge (Bridge #4-218). On February 20, 2008, heavy rain caused a slipout to occur resulting in the loss of roadway shoulder. Deformation and stress cracks began to appear in the pavement indicating the potential for partial or complete loss of the travel lane. This project is to place a rock slope protection (RSP) buttress, reconstruct the shoulder, and repair pavement.  Initial G-11 Allocation 03/07/08: \$350,000 (Additional \$10,000 was allocated for right of way purposes)	487101 01-2265 SHOPP Emergency	2006-07 302-0042 20.20.201.130	\$350,000 \$350,000

During January 2008 winter storms, a slipout occurred at this location resulting in the closure of the roadway. This project is to buttress the roadway with rock slope protection, reconstruct the embankment, and repair the pavement structural section. Due to heavy rain in January and February 2008, a total of four slides on the hillside slopes occurred within the limits of an ongoing roadway realignment contract (EA: 04-172404). This project is to remove slide material and reconstruct slopes using rock slope protection. Heavy rain in early 2008 caused channel flows to damage the concrete channel protection and begin erosion of structural support for access roads and the southbound on-ramp to Route 101. This project is to reconstruct failed concrete bank protection panels, reconstruct a failed check dam and replace rock backfill along the channel for approximately 350 feet. Heavy rain in December 2007 and January 2008 saturated the soil and caused a landslide to occur within the limits of an ongoing highway construction project. This allocation is to excavate approximately 21,000 cubic yards of slide material and stabilize the slope in order to prevent full highway closure. 6 \$1,135,000 Los Angeles 07U-LA-001 35.2/59.9	In and near Santa Monica and Malibu, between the McClure Tunnel and State Route 23. Heavy rain in late January 2008 saturated the adjacent hillsides and caused multiple and continuing debris flows and small slides and slipouts that blocked the travel lanes and shoulders. Initial allocation was to clear and haul storm debris, and repair blocked drainage system as necessary. This allocation is to remove additional unstable rock outcroppings along the very steep bluff.	1X9201 07-4114 SHOPP Emergency	2006-07 302-0042 20.20.201.130	\$1,135,000 \$1,135,000

Initial project was to remove damaged pavement, excavate down to stable material and then rebuild the roadbed support. This supplemental allocation is to remove and dispose of trash and various toxic materials unexpectedly found in the fill material of the off-ramp.	1X8801 07-4101 SHOPP Emergency	2005-06 302-0042 20.20.201.130	\$550,000 \$550,000

During a storm on February 22, 2008, the north fork of Matilija Creek washed out a section of a retaining wall that supports the roadway. The loss of support and rising water subsequently collapsed the support slope and a portion of the southbound travel lane. This project is to remove the failed wall section, stabilize the remaining length of wall, place rock slope protection, and then rebuild the washed out section of support slope and southbound lane.	1X9701 07-4126 SHOPP Emergency	2006-07 302-0042 20.20.201.130	\$1,200,000 \$1,200,000

A recent field inspection and hydraulic analysis revealed that pier 6 of the right structure has eroded down to the top of the footing. Undermining of the pier can cause pier settlement and rotation that would lead to eventual collapse of a portion of the structure. This project is to conduct earthwork to level the channel bed, construct rock slope protection blanket with fabric to armor the piers, and install early erosion warning and monitoring devices.	0L5301 08-0013G SHOPP Emergency	2006-07 302-0042 20.20.201.130	\$990,000 \$990,000
