Fort Bragg	Mendocino	18/19	Carried Over	Traffic Control Devices	Crosswalk and Street Marking	This project will include: Paving and/or Striping Rehab/Repair (Existing Safety), Pavement Rehab/Repair (Existing) Centerline, fog line, bicycle lane, and crosswalk markings provide cost-effective roadway guidance that helps reduce crashes and supplement other traffic control devices such as sign and signals. The city's existing pavement markings need replacing in many locations; these will be replaced by thermoplastic and raised pavement markers. This year nine streets have been identified for such work. The street striping project will replace all white and yellow line markings, decals, raised markers, and word pavement markings on approximately 3.5 miles of streets. The selected streets include arterials, collectors, and safe routes to school. The standards for the application of markings and delineation are set forth in the California Manual on Uniform Traffic Control Devices (MUTCD). The unfunded balance for this project will be covered with local street sales tax dollars.	Chestnut Street, East Oak Street, East Pine Street, Redwood Avenue, Manzanita Street, North Franklin Street, South Harold Street, South Lincoln Street, and Willow Street	Construction	08/2020	12/2020	3-4	2	2
Fort Bragg	Mendocino	20/21	New	Road Maintenance & Rehabilitation	Street and Alley Pavement Maintenance	This project will include: Procurement of Road Maintenance and Rehab Materials, Repair and Servicing of Public Works Equipment When small localized areas of pavement are found to be in poor condition they are treated with small scale pavement repair. Small scale pavement repair must be done in a timely fashion; as potholes grow and allow water intrusion which leads to more large scale deterioration of the pavement. Surface patching and crack sealing are the two primary intermediary actions taken to conserve the existing conditions of pavement. Pothole patching is the most common local technique, done by milling a portion of the pavement to a depth that removes all deteriorated material and then the pothole is filled with asphalt and compacted. The goal of this project is to prevent the local/residential streets and alleys with low PCI's from deteriorating into an un-usable state as these street categories often go unselected for full treatment due to the algorithm used to by the Pavement Management Program. Rohnert Park	Sonoma	18/19	Carried Over	Road Maintenance & Rehabilitation	Southwest Boulevard Rehabilitation	This project will include: Pavement preservation treatments including small areas of pavement repair (i.e. "digouts") and cape seal application (i.e. a combination of chip seal and thin slurry seal) . Cape seals are used when the pavement deterioration is greater than what a slurry seal or microsurfacing is designed to correct, yet the pavement has not deteriorated to the point of requiring an expensive asphalt overlay. A cape seal prevents water penetration, reducing subsequent damage to the road bed, along with providing a new wearing surface.
