

ROAD REPAIR AND ACCOUNTABILITY ACT OF 2017
PROJECT BASELINE AGREEMENT

Goods Movement Rt.605/91 & Cherry Avenue

Resolution TCEP-P-2021-072B
(will be completed by CTC)

1. FUNDING PROGRAM

- ☐ Active Transportation Program
- ☐ Local Partnership Program (Competitive)
- ☐ Solutions for Congested Corridors Program
- ☐ State Highway Operation and Protection Program
- ☒ Trade Corridor Enhancement Program

2. PARTIES AND DATE

- 2.1 This Project Baseline Agreement (Agreement) for the *Goods Movement Rt.605/91 & Cherry Avenue*, effective on, June 23, 2021 (will be completed by CTC), is made by and between the California Transportation Commission (Commission), the California Department of Transportation (Caltrans), the Project Applicant, *Los Angeles County Metropolitan Transportation Authority*, and the Implementing Agency, *Los Angeles County Metropolitan Transportation Authority*, sometimes collectively referred to as the "Parties".

3. RECITAL

- 3.2 Whereas at its December 2, 2020 meeting the Commission approved the Trade Corridor Enhancement Program, and included in this program of projects the *Goods Movement Rt.605/91 & Cherry Avenue*, the parties are entering into this Project Baseline Agreement to document the project cost, schedule, scope and benefits, as detailed on the Project Programming Request Form attached hereto as Exhibit A and the Project Report attached hereto as Exhibit B, as the baseline for project monitoring by the Commission.
- 3.3 The undersigned Project Applicant certifies that the funding sources cited are committed and expected to be available; the estimated costs represent full project funding; and the scope and description of benefits is the best estimate possible.

4. GENERAL PROVISIONS

The Project Applicant, Implementing Agency, and Caltrans agree to abide by the following provisions:

- 4.1 To meet the requirements of the Road Repair and Accountability Act of 2017 (Senate Bill [SB] 1, Chapter 5, Statutes of 2017) which provides the first significant, stable, and on-going increase in state transportation funding in more than two decades.
- 4.2 To adhere, as applicable, to the provisions of the Commission:
- ☐ Resolution *Insert Number* , "Adoption of Program of Projects for the Active Transportation Program", dated
- ☐ Resolution *Insert Number* , "Adoption of Program of Projects for the Local Partnership Program", dated
- ☐ Resolution *Insert Number* , "Adoption of Program of Projects for the Solutions for Congested Corridors Program", dated
- ☐ Resolution *Insert Number* , "Adoption of Program of Projects for the State Highway Operation and Protection Program", dated
- ☒ Resolution G-20-77, "Adoption of Program of Projects for the Trade Corridor Enhancement Program", dated December 2, 2020

- 4.3 All signatories agree to adhere to the Commission's Trade Corridor Enhancement Program, Guidelines. Any conflict between the programs will be resolved at the discretion of the Commission.
- 4.4 All signatories agree to adhere to the Commission's SB 1 Accountability and Transparency Guidelines and policies, and program and project amendment processes.
- 4.5 The Los Angeles County Metropolitan Transportation Authority agrees to secure funds for any additional costs of the project.
- 4.6 The Los Angeles County Metropolitan Transportation Authority agrees to report to Caltrans on a quarterly basis; after July 2019, reports will be on a semi-annual basis on the progress made toward the implementation of the project, including scope, cost, schedule, outcomes, and anticipated benefits.
- 4.7 Caltrans agrees to prepare program progress reports on a quarterly basis; after July 2019, reports will be on a semi-annual basis and include information appropriate to assess the current state of the overall program and the current status of each project identified in the program report.
- 4.8 The Los Angeles County Metropolitan Transportation Authority agrees to submit a timely Completion Report and Final Delivery Report as specified in the Commission's SB 1 Accountability and Transparency Guidelines.
- 4.9 All signatories agree to maintain and make available to the Commission and/or its designated representative, all work related documents, including without limitation engineering, financial and other data, and methodologies and assumptions used in the determination of project benefits during the course of the project, and retain those records for four years from the date of the final closeout of the project. Financial records will be maintained in accordance with Generally Accepted Accounting Principles.
- 4.10 The Transportation Inspector General of the Independent Office of Audits and Investigations has the right to audit the project records, including technical and financial data, of the Department of Transportation, the Project Applicant, the Implementing Agency, and any consultant or sub-consultants at any time during the course of the project and for four years from the date of the final closeout of the project, therefore all project records shall be maintained and made available at the time of request. Audits will be conducted in accordance with Generally Accepted Government Auditing Standards.

5. SPECIFIC PROVISIONS AND CONDITIONS

5.1 Project Schedule and Cost

See Project Programming Request Form, attached as Exhibit A.

5.2 Project Scope

See Project Report or equivalent, attached as Exhibit B. At a minimum, the attachment shall include the cover page, evidence of approval, executive summary, and a link to or electronic copy of the full document.

5.3 Other Project Specific Provisions and Conditions

Approval of this baseline agreement is contingent upon the following actions:

- CTC approval of an allocation amendment for the SR 605/91 Interchange – Gateway Cities project at the May 2021 CTC meeting.
- The successful filing of the Notice of Declaration for SR 91 Auxiliary Lane – Atlantic to Cherry project on or before June 30, 2021.
- In the event of a cost overrun the state will cover a share proportionate to the state contribution of the TCEP funding identified in the Project Programming Request (PPR) submitted with this baseline agreement. (For example, if the state/regional TCEP funding share was a 40/60 ratio, the state may fund no more than 40% of the cost overrun.)
- The 605/91 (PPNO 5388) project received Cycle 1 SB1 Funding. This baseline agreement does not supersede the cycle 1 baseline agreement or cycle 1 guidelines. SB1 funds are subject to the guidelines for the cycle in which they were programmed, and the baseline agreement provisions for the cycle of funding.

Project Title

Route 605/91 Interchange Improvement: Gateway Cities Freight Crossroads Project

Location (Project Limits), Description (Scope of Work)

In the cities of Artesia and Cerritos, Route 91 from Shoemaker Avenue to I-605 Interchange and on I-605 from Alondra Blvd to the I-605/SR-91 interchange.

The project would add one new mixed-flow lane on SR-91 in the westbound direction from the Artesia Boulevard on-ramp to I-605 Connector ramp joining at the point where the westbound SR-91 to the northbound I-605 connector ramp flares from one to two lanes.

Purpose and Need

The 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) projects a 46% increase in bidirectional daily truck trips on SR-91 between 2016 and 2045. By improving existing operational conditions including congestion and bottlenecks, operation deficiencies, and safety issues, the project aims to ensure the corridor has the ability to adequately accommodate future increases in freight travel demand. With the existing and anticipated corridor truck volumes, truck-involved safety incidents will continue to be a concern unless physical and operational improvements are made to address the outdated design standards and congested conditions that lead to safety incidents.

Purpose - The purpose of the project is to reduce congestion and improve freeway operations (both mainline and ramps), improve safety, and improve local and system interchange operations.

Need - Westbound SR-91 approaching the connector ramp for both northbound and southbound I-605 currently experiences substantial congestion, which will continue in the future No Build condition. This congestion, as a result of inadequate capacity of the existing two-lane connector for westbound SR-91 to northbound and southbound I 605 as well as the closely spaced freeway entrance and exit ramps, contributes to a high concentration of accidents.

Additional Information

Earlier project phases were funded through the State Transportation Improvement Program (STIP) with Regional Improvement Program (RIP) funds for PS&E and through the Trade Corridor Enhancement Program (TCEP) Cycle 1 for PS&E and ROW. In March 2019, the project was allocated RIP and TCEP funds for PS&E and ROW. At this time, the programming and subsequent allocation were revised down based on updated project costs for these phases (representing a savings). This PPR shows the actual amount allocated.

This PPR is being amended now to reflect the TCEP Cycle 2 funding request for Construction funding. Included here is a total TCEP funding request for \$69.67 million, including a \$41.802 million request for Regional TCEP funds and a \$27.868 million for State TCEP funds.

Due to COVID-19, the project has experienced a 7-month delay to the design phase since submittal of the application. Specifically, the geotechnical report was delayed due to the Covid-19 shut downs in March 2020, and resultant local sales tax revenue short falls. The late submittal of the geotechnical reports further delayed submittal of the 65% design package, and as a consequence delayed the start of the ROW appraisal process.

Additionally, this PPR has been amended to include the latest project schedule, and add \$3.1 million in Regional TCEP funds from cycle 1. These TCEP funds were awarded in Cycle 1, but not allocated, this request will reduce project savings from \$15 million to \$11.9 million. The increase cost anticipates possible R/W costs due to damages related to reduced access due to the curbed medians we are constructing on Pioneer and Norwalk. Also, acquisition of 4 residential properties will be demolished prior to construction to prevent squatters given the area has a high homeless population. LA Metro plans on requesting to allocate these funds and request expenditure extension for R/W and PS&E phases at the May 2021 CTC meeting.

An error in the Category and Outputs section has been updated; output units have been updated based on what is available in the Cycle 2 available matrix from what was previously in CTIPS.

Project Title

EB SR-91 Atlantic Ave to Cherry Ave. Aux Lane Project

Location (Project Limits), Description (Scope of Work)

In the City of Long Beach on SR-91 from I-710 to Cherry Avenue undercrossing. The proposed improvements consist of adding one auxiliary lane in the eastbound direction, extending the outside #5 lane beyond the Atlantic Ave EB off-ramp to Cherry Ave. then dropping it before the Cherry Ave. undercrossing, and widening the Orange Ave. and Walnut Ave. undercrossings.

Purpose and Need

The 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) projects a 46% increase in bidirectional daily truck trips on SR-91 between 2016 and 2045. By improving existing operational conditions including congestion and bottlenecks, operation deficiencies, and safety issues, the project aims to ensure the corridor has the ability to adequately accommodate future increases in freight travel demand. With the existing and anticipated corridor truck volumes, truck-involved safety incidents will continue to be a concern unless physical and operational improvements are made to address the outdated design standards and congested conditions that lead to safety incidents.

Purpose - The purpose of the Eastbound (EB) State Route 91 (SR-91) Atlantic Avenue to Cherry Avenue Auxiliary Lane Improvements Project (Project) is to enhance safety conditions on the EB SR-91 mainline, reduce congestion, and improve EB freeway operations (both mainline and ramps).

Need - Eastbound SR-91 experiences substantial congestion due to operational deficiencies within the Project Area, which is forecast to increase if no physical and operational improvements are made to the facility. The Project is needed to address operational safety due to the short weaving distance along EB SR-91 between the closely spaced interchanges of the I-710 on-ramps, Atlantic Avenue, and Cherry Avenue which impacts mainline congestion.

Project Outputs			
Category	Outputs	Unit	Total
Operational Improvement	Auxiliary lanes	Miles	1.4

Date 06/02/2021 11:49:54

Additional Information

For Eastbound SR-91 Atlantic Avenue to Cherry Avenue. The minor R/W costs account for utility potholing during the design phase.

An increase to the funding plan was made to match the current project report, this increase will be paid for by LA Metro with local funds. The cost increase is due to increases in unit costs for materials, and cost increases associated with demolition activities.

The final Project Report and filing the NOD was completed as of May 28, 2021.

LA Metro will request a CON award extension in November or December 2022 if necessary.
Local funds for ROW and CON were adjusted to be consistent with the Final PR. \$19K increase in local funds for R/W is due to additional documentation for an aerial easement from the City of Long Beach. Scope of work is unchanged.

SECTION 1 - All Projects

Project Background

This amendment reflects a change in the project's cost estimate. The cost increased between the time of application and the final project report to account for increases to the unit costs of materials.

Programming Change Requested

An \$8,114 increase to the project funding plan. LA Metro will utilize local funds to cover this cost increase.

Reason for Proposed Change

This amendment reflects a change in the project's cost estimate. The cost increased between the time of application and the final project report to account for increases to the unit costs of materials.

If proposed change will delay one or more components, clearly explain 1) reason for the delay, 2) cost increase related to the delay, and 3) how cost increase will be funded

Other Significant Information

1. INTRODUCTION

The California Department of Transportation (Caltrans) District 7 and the Los Angeles County Metropolitan Transportation Authority (Metro), in collaboration with the Gateway Cities Council of Governments (GCCOG) and the Cities of Cerritos and Artesia, propose to widen and improve approximately 3 miles (mi) of freeway along westbound State Route 91 (SR-91) between approximately Shoemaker Avenue and the Interstate 605 (I-605) interchange, and at the I-605 northbound exit to Alondra Boulevard.

The Study Area includes westbound SR-91 (Post Miles [PM] R16.9–R19.8) and northbound I-605 (PM R5.0–R5.8) and traverses the cities of Cerritos and Artesia. Caltrans, as assigned by the Federal Highway Administration (FHWA), is the Lead Agency for compliance under the California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA). The Project Location Map is shown in Attachment A.

The proposed project includes widening approximately 3 miles of westbound State Route 91 (SR-91) between the Artesia Boulevard on-ramp and the Interstate 605 (I-605) interchange through the cities of Cerritos and Artesia. The project would add one new mixed-flow lane on SR-91 in the westbound direction from the Artesia Boulevard on-ramp to I-605 Connector ramp joining at the point where the westbound SR-91 to the northbound I-605 connector ramp flares from one to two lanes. This would create a three-lane exit from westbound SR-91 to I-605: a one-lane I-605 southbound connector, and a two-lane I-605 northbound connector.

The project will also maintain the existing auxiliary lanes between Bloomfield Avenue and Norwalk Boulevard; Norwalk Boulevard and Pioneer Boulevard; and Pioneer Boulevard and the westbound SR-91 to the northbound and southbound I-605 connector ramps. The project also proposes to eliminate the southbound Norwalk and Pioneer Boulevard to westbound SR-91 slip on-ramp, by creating a Type L-7 interchange rather than the current Type L-9. This will improve weaving distance between the closely spaced Norwalk Boulevard and Pioneer Boulevard as well as Pioneer Boulevard and SR-91/I-605 connector interchanges.

The existing outside lane of the westbound SR-91 to the northbound I-605 two-lane connector ramp terminates at I-605 northbound Alondra Boulevard exit. Modifications are proposed at the Alondra Boulevard exit point to provide a single lane exit movement and carry the outside lane past the exit point and merge with the northbound I-605 mainline prior to the Alondra Boulevard Undercrossing (UC).

Project Limits	7-LA-91-PM R16.9/R19.8 7-LA-605-PM R5.0/R5.8	
Number of Alternatives	2 Alternatives (one Build and one No Build)	
	Current Cost Estimate	Escalated Cost Estimate
Capital Outlay Support	\$27.9 million	\$29.8 million
Capital Outlay Construction	\$95.3 million	\$105.3 million
Capital Outlay Right-of-Way	\$14.0 million	\$16.1 million
Funding Source	County of Los Angeles Measure R sales tax funds	
Funding Year	FY 2021/2022	
Type of Facility	Freeway, Freeway Interchange	
Number of Structures	Nine (four new, five widen)	
Environmental Determination or Document	Initial Study / Environmental Assessment (IS/EA) leading to a Negative Declaration/Finding of No Significant Impact (ND/FONSI)	
Legal Description	In Los Angeles County, On Route 91 from Shoemaker Avenue to Interstate 605, And On Interstate 605 from State Route 91 To Alondra Boulevard.	
Project Development Category	4A	

2. RECOMMENDATION

It is recommended that the project be approved using the Preferred Alternative (Alternative 2, Option 1 and 3), and that the project proceed to the next phase. Local agency concurrence has been achieved based on the following (1) the affected local agencies have been consulted with respect to the recommended plan, that (2) their views have been considered, and (3) that the local agencies are in general accord with the plan as presented.

3. BACKGROUND

Project History

In 2012 Metro and the GCCOG initiated the SR-91/I-605/I-405 "Congestion Hot Spots Feasibility Study." The feasibility study identified freeway and arterial "Hot Spots" throughout the corridor. Building off those findings, in 2013, Metro initiated a Project Study Report-Project Development Support (PSR-PDS) for the I-605/SR-91 interchange. The PSR-PDS served as the Project Initiation Document, identified Alternatives and Design Options that would improve mobility within the study area, and estimated the capital outlay support cost necessary to complete the technical studies and analyses for the Project Approval & Environmental Document phase (PA/ED or the "environmental phase").

The PSR-PDS found that the SR-91 currently experiences significant congestion, which is forecasted to increase in the absence of physical and operational improvements. The existing westbound approach of SR-91 to the I-605/SR-91 interchange has insufficient capacity for the projected traffic volumes and would provide substandard levels of service in the future. Additional freeway capacity and other improvements can reduce congestion, improve the flow of traffic, increase safety, and better accommodate projected regional

growth. The Westbound SR-91 Improvement Project (project) is funded by County of Los Angeles Measure R sales tax funds, which are administered by Metro. However, both State and federal environmental reviews are conducted in case federal funds are programmed in the future.

Community Interaction

Metro and Caltrans conducted two Open House Meetings to initiate the Westbound State Route 91 (SR-91) Improvement Project environmental process, on October 18, 2016 in the City of Artesia and October 19, 2016 in the City of Cerritos. The purpose of the meetings were to provide an opportunity for residents and stakeholders in the project area to learn about the project and the environmental process, ask questions, and submit comments that can be used to refine the design options and environmental analyses. 130 people attended the meetings and signed in. A total of 61 public comments were received.

Additional public Open House Meetings were held on January 30, 2018 in the City of Cerritos and on January 31, 2018 in the City of Artesia. The purpose of these meetings was to give the public an update on the project, and to receive additional public input. 190 people attended the meetings and signed in. A total of 66 public comments were received.

Public hearing meetings were conducted on August 1, 2018 and August 2, 2018 in the Cities of Cerritos and Artesia, respectively. The Draft IS/EA was circulated for public review and comment for a period of 30 days, from July 18, 2018, to August 16, 2018.

Existing Facility

SR-91 is a major east-west freeway facility used for commuting, goods movement and interregional travel, and provides vital connections to Los Angeles County to the west and Riverside County to the east. SR-91 within the proposed project limits was designed utilizing a 70-mile per hour (mph) design speed with a posted speed limit of 65 mph. I-605 is a major north-south transportation route. I-605 within the proposed project limits was designed utilizing a 75-mph design speed with a posted speed limit of 65 mph.

Existing I-605 Lane Configuration

Beginning on the southern portion of the project limit heading in the northbound direction, the I-605 facility has three mixed flow lanes and one high occupancy vehicle (HOV) lane. An additional mixed-flow lane is added at the EB SR-91/NB I-605 connector merge point and a second mixed-flow lane is added at the WB SR-91/NB I-605 connector merge point. An auxiliary lane is added at the WB SR-91/NB I-605 connector merge point terminating at Alondra Boulevard. The I-605/Alondra Boulevard interchange is a partial cloverleaf with single and multilane on- and off-ramps. The off-ramps at Alondra Boulevard interchange terminate at a signalized intersection for the northbound and southbound direction. Beginning on the northern portion of the project limit heading in the southbound direction, I-605 facility has five mixed-flow lanes and one HOV lane. An auxiliary lane is added at the Alondra Boulevard SB direct on ramp. The auxiliary lane and one mixed-flow lane diverge to the SB I-605/WB SR-91 connector.

Existing SR-91 Lane Configuration

Beginning in the western portion of the project limit heading in the eastbound direction, the SR-91 facility has four mixed-flow travel lanes and one HOV lane with an auxiliary lane beginning at the NB I-605/EB SR-91 connector merge point. In the westbound direction the SR-91 facility has four mixed-flow travel lanes and one HOV lane with an auxiliary lane beginning at Bloomfield Avenue.

Existing Ramps and Interchanges

The SR-91/Artesia Boulevard westbound off-ramp terminus is located at the eastern end of the Study Area. The exit ramp splits into one left-turn lane and one right-turn lane. The Artesia Boulevard westbound on-ramp currently is a direct ramp from Artesia Boulevard that merges onto SR-91 just east of the Bloomfield Avenue Overcrossing.

The SR-91/Bloomfield Avenue westbound on-ramp is located northwest of the SR-91/Artesia Boulevard westbound off-ramp. The Bloomfield Avenue westbound on-ramp currently is a direct ramp from Bloomfield Avenue that joins SR-91 just west of Bloomfield Avenue.

The SR-91/Norwalk Boulevard Interchange has a partial cloverleaf configuration. The westbound ramps consist of a one-lane off-ramp exit at Norwalk Boulevard that flares to two off-ramp lanes, a one-lane on-ramp from southbound Norwalk Boulevard, and a one-lane loop on-ramp from northbound Norwalk Boulevard.

The SR-91/Pioneer Boulevard interchange also has a partial cloverleaf configuration. The westbound ramps consist of a one-lane off-ramp exit at Pioneer Boulevard that flares to two off-ramp lanes, a two-lane direct on-ramp from southbound Pioneer Boulevard (with one dedicated HOV by pass lane), and a one-lane loop on-ramp from northbound Pioneer Boulevard.

The SR-91/Studebaker Road westbound off-ramp splits into two lanes after a one-lane exit and is located immediately west (downstream) of the SR-91/I-605 freeway-to-freeway connector.

The existing outside lane of the westbound SR-91 to the northbound I-605 two-lane connector ramp terminates as a trapped auxiliary lane for the northbound I-605 exit to Alondra Boulevard. The northbound I-605 Alondra Boulevard off-ramp splits into two lanes.

Structures

The following existing structures are within the project limits:

- Alondra Boulevard bridge number (Br. No) 53-1645 is an Undercrossing (UC) at I-605.
- Two bridges are located at Studebaker Road. Br. No. 53-1706 for the SR-91 traffic is an UC and Br. No. 53-1707F for the WB SR-91/NB and SB I-605 connector traffic is also an UC.
- Gridley Road Br. No 53-1324 is an Overcrossing (OC) supported by columns over SR-91.
- Pioneer Boulevard Br. No 53-1335 is an UC at SR-91.
- Norwalk Boulevard Br. No 53-1334 is an UC at SR-91.
- Bloomfield Avenue Br. No 53-1433 is an OC supported by columns over SR-91.
- Artesia Boulevard Br. No 53-1434 is an OC supported by columns over SR-91.

Soundwalls

Eight existing soundwalls are located along SR-91 WB and eight existing soundwalls are located along SR-91 EB within the project limits. Traffic noise was modeled and evaluated for potential noise impacts in the Noise Study Report (NSR). The NSR is summarized in Section 6H.

Retaining Walls

Four existing retaining walls are located within the proposed project limits. Along NB I-605 Alondra Boulevard off-ramp, an east facing retaining wall is approximately 650 ft in length. Along SB I-605 Alondra Boulevard on-ramp, a west facing wall is approximately 950 ft in length. Along WB SR-91 at 170th Street, a north facing wall is approximately 1,800 ft in length. Along WB SR-91 between Bloomfield Avenue on ramp and Norwalk Boulevard off ramp, a north facing wall is approximately 950 ft in length.

Drainage Facilities

Existing drainage facilities located within the project limits include:

- Four regional drainage systems, Cerritos Line C (F01004153), U3 Line A – Artesia (F01003820), U2 Line A – Artesia Norwalk (F01003336), and U1 Line A – Ely Avenue (F01005063) Storm Drains. The project site is also in the vicinity of the San Gabriel River (F02000367) and Alondra Storm Drain (F01002203).
- Existing storm drain facilities located on the edge of the roadways. Curb opening inlets, grate inlets, overside drains, parkway drains, water carrying barriers, risers, and down drains were found to be within the area of the project

4. PURPOSE AND NEED

Purpose:

The purpose of the project is to reduce congestion and improve freeway operations (both mainline and ramps), improve safety and improve local and system interchange operations.

Proposed improvements include: (1) additional freeway mainline capacity leading to the westbound SR-91 connector ramp to the northbound and southbound I-605, (2) improvements to freeway entrance and exit ramps in the westbound direction on SR-91, and (3) operational improvements for the northbound I-605 at the Alondra Boulevard off-ramp. Associated improvements are also anticipated on the arterial streets in the vicinity of the freeway ramp intersections.

Need:

A. Problems, Deficiencies, Justifications

The westbound SR-91 approaching the connector ramp for both northbound and southbound I-605 currently experiences substantial congestion, which will continue in the future under No Build condition. This congestion, as a result of inadequate capacity of the existing two-lane connector for the westbound SR-91 to northbound and southbound I-

605, as well as the closely spaced freeway entrance and exit ramps, contributes to a high concentration of accidents.

B. Regional and System Planning

Identify Systems

The Artesia Freeway, State Route 91 (SR-91), was initially opened in 1965 and is an east-west freeway traversing the Cities of Los Angeles, Carson, Compton, Long Beach, Bellflower, Artesia, and Cerritos within Los Angeles County and is used for interstate, interregional and intraregional travel. Its westerly terminus is located at Artesia Boulevard, west of Interstate 110 (I-110) in the City of Gardena, and its easterly terminus is in the City of Riverside at the junction with State Route 60 (SR-60). SR-91 is part of the California Freeway and Expressway System and is the only freeway that links Los Angeles, Orange, and Riverside Counties.

SR-91 is functionally classified as a freeway and an urban principal arterial. SR-91 is also a High Emphasis Route, and a Goods Movement Route. The segments within the project area are currently designated as urbanized. It is also a Surface Transportation Assistance Act (STAA) National Network Route for use by oversized trucks and is approximately 59 miles in length.

I-605, also known as the San Gabriel River Freeway, was initially opened in 1964 and is a north-south transportation route within Los Angeles and Orange Counties and is used for international, interstate, interregional and intraregional travel. Its southerly terminus is located at Interstate 405 (I-405) and State Route 22 (SR-22) in Seal Beach, and the northerly terminus is located at Huntington Drive, north of its junction with Interstate 210 (I-210) in the City of Irwindale at the base of the San Gabriel Mountains. The interstate serves as a major route for access to the Los Angeles Central Business District and for Orange County trips and is approximately 27 miles in length.

I-605 is functionally classified as an Interstate, State Highway, and an Urban Principal Arterial-P3. It is also included in the Strategic Highway Network (STRAHNET) and is a Goods Movement Route. The segments within the project area are currently designated as urbanized. It is also a Surface Transportation Assistance Act (STAA) National Network Route for use by oversized trucks.

State Planning

The SR-91 Transportation Concept Report (TCR) (Caltrans, June 2013) shows that 11 lanes (both directions) are required on SR-91 west of I-605 to attain the minimum acceptable LOS F and that 16 lanes are required to attain LOS D. East of I-605, 10 lanes are required for LOS F and 13 lanes are required for LOS D. Existing SR-91 includes 4 mixed-flow lanes and 1 HOV lane west of I-605 and 4 mixed-flow lanes and 1 HOV lane east of I-605, in each direction.

The I-605 TCR (Caltrans, July 2013) shows that 12 lanes (both directions) are required on I-605 north of SR-91 to attain the minimum acceptable LOS F and that 16 lanes are required to attain LOS D. Existing I-605 includes 5 mixed-flow lanes and 1 HOV lane north of SR-91 in each direction.

These reports do not outline the specifics of interchange geometry, entrance or exit ramps, or auxiliary lanes.

Regional Planning

The proposed project is listed in Amendment #3 to the 2016 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) with Project ID 1163S012. The 2016 RTP was approved by the Regional Council of the Southern California Association of Governments (SCAG) on April 7, 2016, and Amendment #3 was adopted in December 2018. The proposed project is currently programmed in the 2019 Federal Transportation Improvement Program (FTIP) with Project ID LA0G1119. The 2019 FTIP was approved by the SCAG on September 6, 2018.

Local Planning

The proposed project is located within the Cities of Cerritos, and Artesia and the County of Los Angeles.

There are two potential developments on Pioneer Boulevard near SR-91 westbound in the City of Artesia. They are hotel and mix retail developments which may be completed by SR-91 westbound widening project begin of construction.

Transit Operator Planning

On the I-605, Metro operates Route 577 beginning at the El Monte Transit Station and traveling along I-605, to its final destination at the City of Long Beach.

On the SR-91, Orange County Transportation Authority (OCTA) operates Route 721 beginning at the Fullerton Transit Station and traveling along the SR-91 and I-110 freeways, to its final destination at Downtown Los Angeles which serves inter-county commuters.

C. Traffic

A Traffic Operations Analysis Report (TOAR) has been prepared for the existing (2016), opening year (2024), and forecasted future (2044) traffic volume and demand. The TOAR was submitted to Caltrans in October 2017 and was approved on June 7, 2018. Detailed data analysis and methodologies used can be referenced in the TOAR.

Current and Forecasted Traffic

New traffic counts were collected in early November 2016. Westbound SR-91 automobile counts were also collected from PeMS detector data, averaged across spring and fall months in 2016 in order to provide estimates of typical daily traffic volumes. SR-91 truck percentages were derived from video counts collected in 2016 and 2017 – a source more reliable than the accuracy of vehicle classification obtained from PeMS detectors. The PeMS detectors between the westbound SR-91 connector ramp to northbound I-605 and Alondra Boulevard have been out of commission since 2014. As a result, the traffic volumes for the northbound I-605 segment have been estimated using 2013 PeMS data, averaged across spring and fall months, as well as 2013 Caltrans reported truck percentages. Twenty-four-hour weekday traffic volume estimates resulting from these data sources are summarized in Table 1 below.

Table 1: Existing Average Daily Traffic Volumes – Year 2016

Location	AADT Volumes
SR-91 WB	
East of Studebaker Road, west of I-605 Connector	89,000
West of Pioneer Boulevard	148,800
East of Pioneer Boulevard	140,600
West of Norwalk Boulevard	139,300
East of Norwalk Boulevard	126,300
West of Bloomfield Avenue	124,600
West of Artesia Boulevard	114,000
East of Artesia Boulevard	113,600
West of 183rd Street	122,000
I-605 NB	
North of Westbound SR-91 On-Ramp	155,600

Source: Table 2-4, Traffic Operations Analysis Report (2018).

The project used SCAG's 2012 Regional Travel Demand Model (RTDM) for horizon year (2044) and opening year (2024) model outputs used for air quality assessments of the No-Build and Build alternatives. The SCAG 2012 RTDM has been used to define and evaluate the Draft 2016–2040 RTP/SCS. Use of the SCAG 2012 RTDM ensures that project forecasts are consistent with the regionally adopted growth assumptions, highway and transit network assumptions, trip generation and distribution methodologies, traffic assignments, and vehicle miles traveled/vehicle hours traveled (VMT)/(VHT) calculation methods.

Table 4 through Table 6, Table 8, Table 10, Table 11, and Table 13 summarize the AM and PM traffic volumes and associated Level of Service (LOS) values along the freeway mainline segments and ramps for existing year 2016 and horizon year 2044. LOS values were calculated using the Highway Capacity Manual (HCM) method of analysis.

In areas with long vehicle queues, slow speeds, and high levels of congestion, the HCM method of analysis is known to report LOS that is better than what drivers experience on the road. In order to report LOS that more closely reflects what drivers experience, the speed method of analysis for determining LOS was also employed for existing year analysis only. The speed method of analysis included observing existing speed profiles in the Study Area and comparing those speeds to likely LOS designations.

The scale upon which the speed-based LOS for freeway mainline segments is measured and presented in Table 2.

Table 2: Mainline Speed-based Level of Service Definitions

LOS	OBSERVED SPEED RANGE
A	> 65 mph
B	≥ 55 – 65 mph
C	≥ 45 – 55 mph
D	≥ 35 – 45 mph
E	≥ 30 – 35 mph
F	< 30 mph

Because speed is constant through a broad range of flows and the ratio of demand flow rate to capacity (v/c) is not directly discernible to road users (except at capacity), the service measure for basic freeway segments is density. Criteria for basic freeway segments using density-based LOS for freeway mainline segments is presented in Table 3.

Table 3: Mainline Density-based Level of Service Criteria

LOS	Density (pc/mi/ln)
A	≤ 11
B	$> 11-18$
C	$> 18-26$
D	$> 26-35$
E	$> 35-45$
F	Demand exceeds capacity > 45

Source: HCM exhibit 11-5.

pc/mi/ln = passenger cars per mile per lane

The speed-based LOS methodology (presented in Table 4) indicates that most of the study corridor operates at LOS E or F, which accurately reflects current conditions. Caltrans PeMS data for the detector station located between the Pioneer Boulevard on-ramp and Gridley Avenue show that the number one and two lanes (those closest to the median which continue as westbound SR-91 through lanes) have considerably higher speeds than the outer lanes (which diverge to I-605). This reflects field observations which show that the system connector ramp lanes (two exit lanes) become highly congested during peak hours and this congestion results in slow speeds in the outer lanes. Speeds on the westbound SR-91 through lanes actually increase after the diverge, due to the diverge of approximately 3,000 vehicles to I-605. Based on this, the speed findings in Table 4 for the segment from Pioneer Boulevard on-ramp to the I-605 off-ramp reflect the three through lanes, while the speeds on the lanes of the connector ramp are much lower and reflect LOS F conditions during each peak hour.

LOS = level of service

SR-91 = State Route 91

NB = northbound

Table 9 summarizes the LOS criteria for freeway merge and diverge segments. These criteria apply to all ramp–freeway junctions and may also be applied to major merges and diverges; high-speed, uncontrolled merge or diverge ramps on multilane highway sections; and merges and diverges on freeway C-D roadways.

Table 9: Merge and Diverge - Level of Service Criteria

LOS	Density (pc/mi/ln)	Comments
A	≤10	Unrestricted
B	>10-20	Merging and diverging maneuvers noticeable to drivers
C	>20-28	Influence area speeds begin to decline
D	>28-35	Influence area turbulence becomes intrusive
E	>35	Turbulence felt by virtually all drivers
F	Demand exceeds capacity	Ramp and freeway queues form

The HCM 2010 density calculations are not applicable to HOV lanes, thus volume-to-capacity (v/c) ratios are instead used to estimate the operation and performance of HOV lanes. While an HOV lane has the ability to carry the same volume of traffic as a mixed flow lane, Caltrans' goal is to have a maximum of 1,650 vehicles per hour in the HOV lanes in order to maintain free flowing conditions. For the purpose of this study, a volume greater than 1,650 vehicles per hour per lane in a HOV lane is considered unacceptable. The results of the existing conditions freeway High Occupancy Vehicle (HOV) segment analysis are represented in terms of volume-to-capacity ratios in Table 14. As shown, all HOV segments are currently operating satisfactorily with volumes less than 1,650 vehicles per hour.

Collision Analysis

Accident data for the project limits are provided in Table 16 and Table 17 for the 3-year period from January 1, 2012 through December 31, 2014. The accident data were obtained from Caltrans' Traffic Accident Surveillance and Analysis System (TASAS) database.

As shown in Table 16 and Table 17, a total of 1,177 accidents occurred within the project limits, including the mainline segments, freeway-to-freeway direct connect ramps, and freeway-to-arterial ramps. The majority of the accidents (88 percent) occurred on the mainline segments, while the remainder (12 percent) occurred at the freeway-to-freeway direct connector ramps and freeway-to-arterial ramps. The accident rates at 12 locations were higher than the statewide averages for fatal plus injury accidents, while accident rates at 11 locations were higher than the statewide averages for total accidents.

Rear-end collisions were the most common accident type. Other key accident types included sideswipe. Rear-end collisions are typically related to traffic congestion in chokepoint areas and are associated with sudden attempts to stop when traffic volumes exceed the capacity of the road. The majority of sideswipe accidents can usually be attributed to merging/diverging vehicle movements.

**Table 16: WB SR-91 Freeway, Summary of Existing Accident Rates
(01/2012–12/2014)**

Notes: 1. Accident rates listed are in per million vehicles (for ramps) or per million vehicle miles (for mainline)

■ Highlighted cells indicate higher than statewide average accident rates

The proposed improvements in the study area are expected to reduce the potential for accidents by relieving traffic congestion on the mainline and ramps. Increasing weaving distance between successive on- and off-ramps would allow vehicles to weave/merge more easily throughout the study area, thereby reducing sideswipe occurrences by giving drivers more time and space to merge with adjacent traffic.

5. ALTERNATIVES

5.A VIABLE ALTERNATIVES

The proposed alternatives include the No Build Alternative and a Build Alternative. The Build Alternative would add one mixed flow lane, modify existing interchanges, improve existing freeway design features, and include other operational improvements in the westbound direction of SR-91 and at the northbound I-605 exit to Alondra Boulevard. Five Design Options for the Build Alternative were also evaluated. These Design Options include varying lane and shoulder widths on westbound SR-91, varying interchange configurations at Pioneer Boulevard and Norwalk Boulevard, as well as four lanes on the Gridley Lane overcrossing. These Alternatives and Design Options are each discussed below.

5.A.1 No Build Alternative

Alternative 1 is the No Build Alternative. The No Build Alternative does not include any planned improvements to the westbound SR-91 corridor. Under this alternative, there would be no reconstruction or improvements to the SR-91 corridor. Within the project limits, westbound SR-91 would continue to have four mixed flow lanes that are 11 feet wide, a 1.5-foot-wide left median shoulder, one 12-foot-wide High Occupancy Vehicle (HOV) lane, and one 12-foot-wide auxiliary lane between certain successive on- and off-ramps.

5.A.2 Preferred Alternative (Design Option 1 and 3)

The Project Development Team (PDT) discussed the need to identify a Preferred Alternative and document it's selection based on the combination of IS/EA and ND/FONSI. Various alternatives and design options within Alternative 2 were evaluated and documented. The Preferred Alternative would need to meet the purpose and need. Thus, on October 25, 2018 the PDT decided to recommend Alternative 2 with Design Option 1

(Reduced Lane/Shoulder Width) and Design Option 3 (Pioneer Boulevard Westbound Ramps/168th Alignment) as the Preferred Alternative.

The Preferred Alternative adds one new mixed-flow lane in the westbound direction for SR-91 from the Artesia Boulevard westbound on-ramp to I-605, joining at the point where the westbound SR-91 to the northbound I-605 connector ramp flares from one to two lanes. In addition, the new mixed-flow lane would create a three-lane exit movement on the westbound SR-91 to both the northbound and southbound I-605 connector ramps where only a two-lane exit movement exists now.

Alternative 2 proposed standard lane and shoulder widths with five 12-foot-wide mixed-flow lanes, a 10-foot-wide left median shoulder, one 12-foot-wide HOV lane with a 2-foot-wide HOV buffer between HOV and mixed-flow lanes, and one 12-foot-wide auxiliary lane between certain successive on- and off-ramps. The project will maintain the existing auxiliary lanes between Bloomfield Avenue and Norwalk Boulevard; Norwalk Boulevard and Pioneer Boulevard; and Pioneer Boulevard and the westbound SR-91 to the northbound and southbound I-605 connector ramps.

Interchange modifications at Pioneer Boulevard and Norwalk Boulevard are proposed. These modifications include reconstructing existing Type L-9 cloverleaf interchanges into Type L-7 cloverleaf interchange configurations. Typical Type L-7 and Type L-9 local street interchanges are shown in Figure 1. The new configuration would eliminate the direct on-ramp which will increase the weaving lengths on westbound SR-91 mainline between these two interchanges, as well as the I-605 northbound/southbound connector ramp. The existing loop on-ramp would be modified to intersect with Pioneer and Norwalk Boulevard at a 90-degree angle to eliminate the free-right movement.

Figure 1: Typical Type L-7 and L-9 Local Street Interchanges

The existing outside lane of the westbound SR-91 to the northbound I-605 two-lane connector ramp terminates at Alondra Boulevard (i.e. the outside lane is a trap lane exiting at Alondra Boulevard). Improvements are proposed at the Alondra Boulevard exit to provide a single lane exit movement and carry the outside mixed flow lane past the exit point then merge with the northbound I-605 mainline prior to the Alondra Boulevard Undercrossing. No Build and Build configurations for the I-605 northbound Alondra Boulevard off-ramp are shown in Figure 2.

Figure 2: I-605 NB Alondra Off-Ramp

The following design options were selected in conjunction with Alternative 2 as the Preferred Alternative:

- **Design Option 1: Reduced Lane/Shoulder widths.** This design option proposes reduced lane and shoulder widths to eliminate the need for right of way acquisition of 18 residential parcels and one business along 170th St between Norwalk and Pioneer Boulevard. The reduced widths are narrower than standard and consist of four 11-foot-wide and one 12-foot-wide mixed-flow lanes, a 1.5-foot-wide left median shoulder, one 12-foot-wide HOV lane with a 2-foot-wide HOV buffer between HOV and mixed-flow lanes, and one 12-foot-wide auxiliary lane between certain successive on- and off-ramps.
- **Design Option 3: Pioneer Blvd WB Ramps/168th St Alignment.** This design option proposes to realign Pioneer Boulevard WB Ramps with 168th St. The realignment creates a 4-leg intersection with Pioneer Boulevard as the north-south legs, the WB on/off ramps being the east leg, and 168th Street being the west leg. This design option improves traffic operation on Pioneer Boulevard by eliminating the closely spaced intersection with 168th St as well as the existing uncontrolled driveways within the WB on/off ramps intersection. Design Option 3 would require acquisition of three vacant parcels and 5 residential parcels on 168th Street while eliminating the need to acquire the Arco gas station on Pioneer Boulevard within the City of Artesia.

Although the following additional design options within Alternative 2 were evaluated, they were not selected to be part of the Preferred Alternative:

- **Design Option 2: Pioneer Blvd L-9.** This design option proposes to maintain the existing type L-9 Interchange at Pioneer Boulevard westbound ramps. However, the two westbound on-ramps would be modified to intersect with Pioneer Boulevard at a 90-degree angle to eliminate the free-right movement. This design

option would maintain the existing weaving length between successive on- and off-ramps which would not improve safety and traffic operations when compared to the L-7 configuration proposed in the Preferred Alternative.

- **Design Option 4: Diamond Ramps.** This design option proposes a diamond configuration at westbound Pioneer and Norwalk Boulevard interchanges in lieu of the proposed L-7 cloverleaf interchange configuration. The diamond ramps were analyzed for comparison purposes to the partial cloverleaf ramp configuration options. The diamond ramps have a smaller footprint than the cloverleaf options but provide less weaving distance between successive on- and off-ramps, and therefore do not improve safety and traffic operations when compared to the cloverleaf design options.
- **Design Option 5: Four-Lane Gridley Road Overcrossing.** This design option proposes a four-lane Gridley Rd bridge which the City of Cerritos requested be studied. This design option would add approximately \$4 million of construction cost, has no additional right of way acquisition, and is within the environmental footprint that is being studied with this project. However, since a 4-lane Gridley Road bridge compared to a 2-lane is not required to fulfill the purpose and need of the project, the City of Cerritos would need to obtain the additional funds necessary for the improvement.

Transportation system management (TSM) provides cost-effective improvements that increase transportation system performance without the major expense of capital expansion projects. These programs include minor geometric improvements, bicycle and pedestrian improvements, and other measures such as signal synchronization, motorist information, bus signal priority, and freeway ramp metering. Transportation demand management (TDM) provides cost-effective improvements that reduce system demand by eliminating trips or shifting trips out of the peak periods to other less congested time periods during the day and thus increase transportation system performance without implementing travel restrictions. Transportation demand management programs include rideshare programs, employer flex-time, parking pricing, and intermodal improvements that support TDM programs and transfers between modes at key locations. TDM programs are devised to change the behavior of travelers. Some TDM approaches are voluntary, and they motivate participants with incentives. Other TDM approaches apply disincentives to drive single-occupancy vehicles (SOVs), such as fees and constraints.

A TSM/TDM alternative is not considered a viable stand-alone option because it does not fulfill the project purpose. A TSM/TDM alternative on its own would:

- Provide minimal congestion reduction
- Provide minimal enhancement of operations and improvement in trip reliability
- Not increase mobility significantly because it would have limited effect on congestion
- Not maximize throughput because no additional through lanes are provided.

TSM and TDM are similar in a number of ways, because they may:

- Lessen the number of trips
- Lessen peak hour travel
- Conserve energy
- Reduce emissions

- Provide more travel alternatives.

Although TSM and TDM measures alone do not satisfy the purpose and need of the project, the following TSM and TDM measures are beneficial and will be incorporated into the Build alternative for the proposed project.

- Upgraded traffic signals interconnected and coordinated with adjacent signals and ramp meters at locations of interchange improvements
- Additional way-finding signs on freeways and arterials
- On- and off-ramps designed to limit impacts to non-motorized travel and preserve access to bike lanes and trails
- Intelligent Transportation Systems (ITS), including fiber-optic and other communication systems for improved connectivity and remote management; changeable message signs, closed-circuit television coverage of the entire freeway mainline, ramps, and adjacent arterials; video detection systems; and vehicle detection systems for volume, speed, and vehicle classification

Structures

SR-91 WB Mainline Studebaker Road UC (Widen) (53-1706)

For the Preferred Alternative, the existing Studebaker Road UC will be widened on the northerly side to accommodate the proposed improvements along WB SR-91. This bridge represents the westerly project boundary. A future project that would continue the added mixed-flow lane beyond the bridge has been considered in the design of this bridge. The project proposes to widen the undercrossing for this ultimate condition, eliminating future mobilization, staging, user interruption, and partial demolition costs typically associated with a widening project. The widening is proposed to be approximately 31'. Precast (PC)/prestressed (PS) concrete California Wide-Flange girders were determined to be the ideal superstructure. The proposed superstructure will match existing and will exceed minimum vertical clearance requirements over Studebaker Road.

WB SR-91 to I-605 Connector Studebaker Road UC (Widen) (53-1707F)

For the Preferred Alternative, the existing connector ramp bridge is proposed to be widened on both the north and south sides. The proposed final condition will include three 12' lanes and two 10' shoulders. The bridge will be widened approximately 18' on the northerly side and 10' on the southerly side. Superstructure type will be selected in final design between Precast (PC)/prestressed (PS) concrete California Wide-Flange girders and cast-in-place (CIP)/PS concrete box girder. The proposed superstructure will match existing and will exceed minimum vertical clearance requirements over Studebaker Rd.

Gridley Road OC (Replace) (53-1324)

SR-91 travels under Gridley Road just east of the SR-91/I-605 Interchange. To accommodate the proposed WB SR-91 mainline widening, the overcrossing will be replaced as the existing bridge columns are located at the edge of shoulder. The proposed bridge replacement will accommodate two 12' lanes, add a 6' right shoulder in both directions, and provide 6' sidewalks on both sides over the existing condition of a sidewalk on the east side of the bridge only. A concrete barrier will be used to separate the pedestrian traffic from vehicular traffic. The proposed is a 2-span bridge along the existing alignment. The proposed superstructure type is a CIP/PS concrete box girder. The proposed superstructure will exceed the minimum vertical clearance requirements of SR-

91. The bridge replacement will occur as a single stage construction, and Gridley Road Overcrossing will be closed to traffic during construction.

SR-91 WB Mainline Pioneer Blvd UC (Widen) (53-1335)

For the Preferred Alternative, the existing bridge will need to be widened in the westbound direction (north side). The widening varies from 15' on the begin bridge (BB) location to approximately 16' on the end bridge (EB) location, to accommodate the proposed improvements. A single-span cast-in-place prestressed concrete box girder on open end abutments is proposed for the bridge widening. The proposed superstructure will match existing and will exceed minimum vertical clearance requirements over Pioneer Boulevard.

SR-91 WB On-ramp Norwalk Blvd UC (New)

The existing Norwalk Boulevard WB SR-91 loop on-ramp lane on Norwalk Boulevard UC will be utilized for the proposed mixed-flow lane added to WB SR-91. A new structure will be constructed adjacent to Norwalk Boulevard UC to accommodate the newly constructed Norwalk Boulevard WB SR-91 loop on-ramp. The proposed superstructure will consist of a single-span CIP/PS concrete box girder on high cantilever seat-type abutments.

Bloomfield Ave OC (Replace) (53-1433)

The existing Bloomfield Avenue OC will be replaced to accommodate the WB SR-91 widening. The proposed bridge will provide two 12' lanes with a 6' right shoulder and a 6' wide sidewalk in each direction, separated by a 4'-0" wide raised median. A concrete barrier will be used to separate the pedestrian traffic from vehicular traffic. The proposed superstructure type is a CIP/PS concrete box girder. Superstructure type will be selected in final design between CIP/PS concrete box girder and pre-cast/PS concrete girder. The proposed superstructure will exceed the minimum vertical clearance requirements of SR-91. The bridge replacement will occur with a two-stage construction. While half of the structure is in construction, the other half will be open to traffic.

Retaining Walls

Four new retaining walls are required for the Preferred Alternative. One retaining wall is proposed along Alondra Boulevard NB off-ramp to minimize impact to adjacent businesses. The retaining wall would be approximately 880' long and vary up to 13 feet in height. One retaining wall is proposed along Gridley Road on the southwest side of SR-91 to minimize grading impacts to Ecology park. The retaining wall would be approximately 520' long and vary up to 9 feet in height. One retaining wall is proposed along Bloomfield Avenue on the northeast side of SR-91 to minimize grading impacts to a residential parcel. The retaining wall would be approximately 590' long and vary up to 10 feet in height. One retaining wall is proposed along Bloomfield Avenue on the southeast side of SR-91 to replace the existing wall abutting the newly constructed Aria Apartments. The retaining wall would be approximately 300' long and vary up to 6 feet in height. The proposed retaining walls are likely to be standard plan walls that conform to Caltrans Standard Plans.

Drainage Improvement

Regional

The proposed improvements will only impact or modify the existing regional facility Cerritos Line C within the project area.

On-site

Existing inlets at roadway outer edges will be removed or capped if they lie within the proposed widened section. New inlets will be constructed at the new widened edge and convey flow to follow the existing flow pattern. Some runoff will sheet flow onto adjacent unpaved landscaped areas and be treated by proposed treatment best management practices (BMPs), such as biofiltration swales, infiltration basins, and detention basins. Existing local culvert crossings will be maintained and extended.

5.A.2.1 Traffic Analysis

The results of the Traffic Operations Analysis Report (which used the Highway Capacity Manual (HCM) method of analysis for determining LOS) indicate that all existing freeway mainline segments are currently operating at LOS D or better during the peak hours. All freeway mainline segments would also operate at LOS D or better during peak hours in the 2044 No Build scenario.

All existing freeway weaving segments operate at LOS D or better during the peak hours, except for the weaving segment from the Pioneer Boulevard on-ramp to the I-605 off-ramp for which the HCM results indicate LOS F. All existing freeway merge and diverge segments operate at LOS D or better during peak hours. All existing intersections in the Study Area operate at LOS D or better during peak hours.

The existing (2016) congestion during peak hours along westbound SR-91 is caused by the geometric conditions along the Study Area and the high traffic demand. The two-lane westbound to northbound/southbound freeway-to-freeway connector ramp is not able to handle the peak-hour flow of traffic without creating vehicle queues. The vehicle queues cause slowing and congestion on westbound SR-91 leading up to the I-605 connector ramp.

Under No-Build and Build conditions, the HCM based LOS estimates are similar to existing results, with mostly LOS D or better, except for the segment from the Pioneer on-ramp to the I-605 connector, which remains at LOS F under the Build condition. In locations with a high level of congestion, the HCM techniques is known to report levels of service that do not match field observations. Generally, the LOS is reported to be better than actually experienced in the field or might be expected to occur in the future. To provide more reliable future estimates, a microsimulation model of the corridor was developed to assess operating conditions under the future No-Build and Build conditions for the entire study corridor. The traffic microsimulation model is used to assess the entire corridor operations (as opposed to segment by segment analysis such as with HCM), without and with, the proposed improvements and will provide input to geometric design iterations.

Table 18 summarizes analysis results of the 2044 No-Build, and 2044 Build conditions using HCM method. As shown, the levels of service based on the HCM analysis are generally consistent across all the scenarios for 2044, with no major shifts in level of service between future 2044 No-Build and 2044 Build conditions.

Traffic Microsimulation

The results of the microsimulation modeling of the No-Build and Build alternative indicate the following:

AM Peak – the proposed improvements under the Build scenario would result in significant changes in key performance measures for the full project area as well as for the key sections between Pioneer Boulevard and the I-605 ramps, and Pioneer Boulevard and Norwalk Boulevard. During the AM peak period (5 AM to 11 AM) for the entire study corridor, the average vehicle delay is projected to decrease by approximately 82 seconds per vehicle, total travel time will decrease by 23 percent and speeds will increase by approximately 14 miles per hour. For the AM peak hour, the improvement is even greater with a decrease in average delay of approximately 146 seconds per vehicle, a 39 percent decrease in travel time and a nearly 24 miles per hour increase in average speeds. With the proposed improvements, speeds would be near free flow conditions and congestion would be greatly reduced during the AM peak.

PM Peak – the proposed improvements under the Build scenario would result in significant changes in key performance measures for the full project area, as well as for the key sections between Pioneer Boulevard and the I-605 ramps, and Pioneer Boulevard and Norwalk Boulevard. During the PM peak period (2 PM to 8 PM) for the entire study corridor, the average vehicle delay is projected to decrease by approximately 134 seconds per vehicle, total travel time will decrease by 43 percent and speeds will increase by 22 miles per hour. For the PM peak hour, the improvement is even greater with an average vehicle delay decrease of approximately 185 seconds, 50 percent decrease in travel time and a 28 mile per hour increase in average speeds. With the proposed improvements, speeds would be near free flow conditions and congestion would be greatly reduced during the PM peak.

Intersection Control Evaluation

An Intersection Control Evaluation (ICE) Analysis was conducted at the existing signalized ramp terminal intersections within the study area and is summarized in the Traffic Operations Analysis Report and in Table 19 below. According to the analysis, roundabouts provide a minor benefit operationally compared to a traffic signal using a 2-lane roundabout. Single lane roundabouts were studied, and the result showed that they operated at deficient overall LOS/delay. The roundabout alternatives studied at all five (5) intersections do not provide a compelling benefit over the signalized intersection controls. The Caltrans Collision Cost Analysis evaluation resulted in negative B/C values for the 2-lane roundabout options at Alondra Boulevard, Bloomfield Avenue, Studebaker Road, and Norwalk Boulevard and a benefit/cost ratio (B/C) value of less than 0.10 at Pioneer Boulevard. This indicates that the roundabout costs outweigh the potential benefits or in the case of Pioneer Boulevard, provide very little benefit over cost. Given the estimated B/C values combined with the potential right-of-way impacts and lack of local support, roundabouts were removed from further consideration at each of the study intersections.

Table 19: Year 2044 Build Conditions Intersection Analysis Summary

STUDY INTERSECTION	Year 2044 No-Build Conditions (Signalized)				Year 2044 Build Conditions Roundabout Alternative					Year 2044 Build Conditions (Signalized)				B/C Ratio

5.A.2.2 Nonstandard Bold and Underlined Features

The Preferred Alternative requires documentation of nonstandard bold and underlined features. A Design Standard Decision Document (DSDD) was approved on 1/16/19. The proposed nonstandard bold and underlined features are summarized in the sections below. The approved DSDD is included in Attachment N. Fill and cut slopes will be graded per standard where feasible. Nonstandard grading will be documented in a supplemental DSDD in PS&E phase.

Design Feature Number 1 – Stopping Sight Distance Standards: HDM Index 201.1 states “Table 201.1 shows the minimum standards for stopping sight distance related to a design speed for motorists.”

Nonstandard stopping sight distance (SSD) standards are proposed at several locations, shown in Table 20 below:

Table 20: Proposed Nonstandard SSD

Nonstandard Feature-Location	Location	Station	Exist	Prop	Standard
1-1	Pioneer Blvd. WB Off-Ramp	"PN-1" 55+50.00 to 57+05.00 (Horizontal)	200' (30 MPH)	155' (25 MPH)	200' (30 MPH)
1-2	WB SR-91 (HOV lane)	"SR-91" 1009+13.55 to 1015+06.45 (Horizontal)	415' (49 MPH)	593' (60 MPH)	750' (70 MPH)
1-3	Bloomfield Ave.	"BL" 18+23.82 to 20+46.82 (Vertical)	223' (32 MPH)	223' (32 MPH)	300' (40 MPH)

Design Feature Number 2 – Standards for Superelevation: HDM Index 202.2 (1) states “Roadways described below, (a) through (e), shall be designed with the emax indicated. Based on an emax selected by the designer for one of the conditions above, superelevation rates from Tables 202.2A through 202.2E shall be used with the minimum curve radii and design speed (Vd). If less than standard superelevation rates are approved (see index 82.1), Figure 202.2 shall be used to determine superelevation based on the curve radius and maximum comfortable speed.”

Nonstandard Feature:

Nonstandard superelevation rates are proposed at several locations, shown in Table 21 below:

Table 21: Nonstandard Superelevation

Nonstandard Feature-Location	Location	Station	Design Speed	Radius	Exist.	Prop. Comfortable Speed	Standard
2-1	SR-91	"SR-91" 995+43.88 to 1020+05.16	70 MPH	3,600'	3%	3% >80 MPH	5.8%
2-2	Pioneer Blvd. WB Off-ramp	"PN-1" 56+18.10 to 57+23.55	32 MPH	160'	2%	6% 25 MPH	12%
2-3	Pioneer Blvd. WB Loop On-ramp	"PN-2" 64+53.43 to 64+78.77	25 MPH	120'	6%	8% 24 MPH	12%
2-4	Bloomfield WB On-ramp	"BL-1" 14+16.72 to 14+38.53	25 MPH	80'	2%	3% 18 MPH	12%

Design Feature Number 3 - Superelevation Transitions: HDM Index 202.5 (1) states "A superelevation transition should be designed in accordance with the diagram and tabular data shown in Figure 202.5A to satisfy the requirements of safety, comfort and pleasing appearance."

HDM Index 202.5 (2) states "Two-thirds of the superelevation runoff should be on the tangent and one-third within the curve."

Nonstandard Feature:

Nonstandard superelevation transitions are proposed at several locations, shown in Table 22 below:

Table 22: Nonstandard Superelevation Transitions

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
				Super Transition	
3-1	Pioneer Blvd. WB Off-ramp	"PN-1" 55+18.10 to 56+18.10	N/A	100' 2/3-1/3	150' 2/3-1/3
3-2	Pioneer Blvd. WB Off-ramp	"PN-1" 57+23.55 to 58+23.55	N/A	100' 2/3-1/3	150' 2/3-1/3
3-3	Pioneer Blvd. WB Off-ramp	"PN-1" 58+38.90 to 60+38.90	N/A	200' 2/3-1/3	300' 2/3-1/3
3-4	Pioneer Blvd. WB Loop On-ramp	"PN-2" 56+74.22 to 58+48.82	N/A	Curve only	2/3-1/3

Nonstandard Feature- Location	Location	Station	Exist.	Prop.	Standard
			Super Transition		
3-5	Pioneer Blvd. WB Loop On-ramp	"PN-2" 56+59.59 to 59+43.44	N/A	283.85' 2/3-1/3	300' 2/3-1/3
3-6	Pioneer Blvd. WB Loop On-ramp	"PN-2" 64+78.77 to 66+23.25	96'	156.02' 2/3-1/3	210' 2/3-1/3
3-7	Norwalk Blvd. WB Off-ramp	"NW-1" 85+45.93 to 87+45.93	N/A	200' 2/3-1/3	300' 2/3-1/3
3-8	Norwalk Blvd. WB Off-ramp	"NW-1" 87+50.06 to 89+54.81	N/A	204.75' 2/3-1/3	300' 2/3-1/3
3-9	Norwalk Blvd. WB Off-ramp	"NW-1" 89+54.81 to 91+59.55	N/A	204.74' 2/3-1/3	300' 2/3-1/3
3-10	Norwalk Blvd. WB Off-ramp	"NW-1" 95+74.81 to 96+54.73	N/A	79.92' 2/3-1/3	150' 2/3-1/3
3-11	Norwalk Blvd. WB On-ramp	"NW-2" 91+42.32 to 93+42.32	33.33'	200' 2/3-1/3	300' 2/3-1/3
3-12	Bloomfield WB On- ramp	"BL-1" 6+32.10 to 6+90.36	N/A	58.26' 2/3-1/3	150' 2/3-1/3
3-13	Bloomfield WB On- ramp	"BL-1" 6+90.36 to 9+06.16	N/A	215.8' 2/3-1/3	300' 2/3-1/3
3-14	Bloomfield WB On- ramp	"BL-1" 10+82.36 to 13+49.85	N/A	267.49' 2/3-1/3	300' 2/3-1/3
3-15	Bloomfield WB On- ramp	"BL-1" 13+49.85 to 14+16.72	N/A	66.87' 2/3-1/3	150' 2/3-1/3

Design Feature Number 4 – Standards for Curvature: HDM Index 203.2 states “Tables 202.2A through 202.2E shall be the minimum radius of curve for superelevation rates and design speeds on highways.”

Nonstandard Feature:

Nonstandard minimum radii are proposed at several locations, shown in Table 23 below:

Table 23: Nonstandard Minimum Radius

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
4-1	I-605 Alondra Blvd. NB off-ramp	"AL-1" 101+02.90 to 103+50.70	300' (35 MPH)	300' (35 MPH)	500' (45 MPH)
4-2	Pioneer Blvd. WB Off-ramp	"PN-1" 55+84.77 to 57+56.68	200'	160'	211'
4-3	Pioneer Blvd. WB Off-ramp	"PN-1" 59+72.23 to 63+49.70	500'	381'	492'
4-4	Bloomfield Ave. WB On-ramp	"BL-1" 13+94.43 to 15+15.20	85'	80'	119'

Design Feature Number 5 – Compound Curves: HDM Index 203.5 states “Where compound curves are necessary, the shorter radius should be at least two-thirds the longer radius when the shorter radius is 1,000 feet or less. On one-way roads, the larger radius should follow the smaller radius.”

Nonstandard Feature:

A nonstandard compound curve is proposed at the following location, shown in Table 24 below:

Table 24: Nonstandard Compound Curves

Nonstandard Feature	Location	Station	Exist.	Prop.	Standard
5	Pioneer Blvd. WB On-Ramp	"PN-2" 56+74.22 to 61+93.20	N/A	Shorter radius is less than two-thirds the longer radius (3,000'/175')	Shorter radius should be at least two-thirds the longer radius (3,000'/2,000')

Design Feature Number 6 – Standards for Grade: HDM Index 204.3 states “Minimum grades should be 0.5 percent in snow country and 0.3 percent at other locations.”

Nonstandard Feature:

A nonstandard grade is proposed at the following location, shown in Table 25 below:

Table 25: Nonstandard Grades

Nonstandard Feature	Location	Station	Exist.	Prop.	Standard
6	SR-91/I-605 W-S Connector	"605-1" 123+00.00 to 124+10.34	0.14%	0.14%	0.30%

Design Feature Number 7 – Lane Width: HDM Index 301.1 states “**The minimum lane width on two-lane and multilane highways, ramps, collector-distributor roads, and other appurtenant roadways shall be 12 feet, except as follows:**

- For conventional State highways with posted speeds less than or equal to 40 miles per hour and AADTT (truck volume) less than 250 per lane that are in urban, city or town centers (rural main streets), the minimum lane width shall be 11 feet.
- Where a 2-lane conventional State highway connects to a freeway within an interchange, the lane width shall be 12 feet.
- Where a multilane State highway connects to a freeway within an interchange, the outer most lane of the highway in each direction shall be 12 feet.”

Nonstandard Feature:

Nonstandard lane widths are proposed at several locations, shown in Table 26 below:

Table 26: Nonstandard Lane Widths

Nonstandard Feature	Location	Station	Exist.	Prop.	Standard
7	SR-91	"SR-91" 899+00.39 to 1026+95.16	11'	11'	12'

Design Feature Number 8 – Shoulder Width: HDM Index 302.1 states “**The shoulder widths given in Table 302.1 shall be the minimum continuous usable width of paved shoulder on highways.**”

Nonstandard Feature:

Nonstandard shoulder widths are proposed at several locations, shown in Table 27 below:

Table 27: Nonstandard Shoulder Widths

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
8-1	WB SR-91 Left Shoulder	"SR-91" 899+00.39 to 1026+95.16	0'-1.5'	0' - 8'	10'
8-2	WB SR-91 Right Shoulder Between Pioneer and Norwalk Interchanges	"SR-91" 968+59.41 to 978+79.49	8'	8'	10'
8-3	WB SR-91 Right Shoulder at Norwalk UC	"SR-91" 983+46.68 to 986+35.40	6'-10'	8'-10'	10'

Design Feature Number 9 – Median Width Conventional Highways - Urban and Rural Main Street: HDM Index 305.1 (2) states “In Urban and Rural Main Street areas, the minimum median width for multilane conventional highways should be 12 feet.”

Nonstandard Feature:

A nonstandard median width is proposed at the following location, shown in Table 28 below:

Table 28: Nonstandard Urban Main Street Median Width

Nonstandard Feature	Location	Station	Exist.	Prop.	Standard
9	Norwalk Blvd.	"NW" 19+85.64 to 23+18.14	8'	8'	12'

Design Feature Number 10 – Median Width - Freeways and Expressways: HDM Index 305.1 (3)(a) states “In areas where restrictive conditions prevail the minimum median width shall be 22 feet.”

Nonstandard Feature:

Nonstandard median width is proposed at the following location, shown in Table 29 below:

Table 29: Nonstandard Freeway Median Width

Nonstandard Feature	Location	Station	Exist.	Prop.	Standard
10	SR-91	"SR-91" 899+00.39 to 1026+95.16	5'	5-11.5'	22'

Design Feature Number 11 – Horizontal Clearances: HDM Index 309.1 (3)(b) states “(b) The minimum horizontal clearance to walls, such as abutment walls, retaining walls in cut locations, and noise barriers on all facilities, including auxiliary lanes, ramps and collector-distributor roads, shall be not less than 10 feet per Table 302.1.”

Nonstandard Feature:

Nonstandard horizontal clearance is proposed at the following location, shown in Table 30 below:

Table 30: Nonstandard Horizontal Clearances

Nonstandard Feature	Location	Station	Exist.	Prop.	Standard
11	WB SR-91 Right Shoulder Between Pioneer and Norwalk Interchanges	"SR-91" 968+59.41 to 978+79.49	8'	8'	10'

Design Feature Number 12 – Outer Separation: HDM Index 310.2 states “In urban areas and in mountainous terrain, the width of the outer separation should be a minimum of 26 feet from edge of traveled way to edge of traveled way.”

Nonstandard Feature:

Nonstandard outer separation is proposed at the following locations, shown in Table 31 below:

Table 31: Nonstandard Outer Separation

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
12-1	Beach St.	"SR-91" 929+44.74 to 931+50.83	34'	19.5' to 34'	26'
12-2	170th St.	"SR-91" 968+84.36 to 975+23.94	27.7'	14.2'	26'

Design Feature Number 13 – Interchange Spacing: HDM Index 501.3 states “The minimum interchange spacing shall be one mile in urban areas, two miles outside urban areas, and two miles between freeway-to-freeway interchanges and other interchanges. The minimum interchange spacing on Interstates outside of urban areas shall be three miles.”

Nonstandard Feature:

Existing nonstandard interchange spacing are proposed to be maintained at the following locations, shown in Table 32 below:

Table 32: Nonstandard Interchange Spacing

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
13-1	I-605/SR-91 Interchange to Alondra Blvd. Interchange	"I-605" 266+46.65 to 307+60.81	0.75 Mile	0.75 Mile	2 Miles
13-2	I-605/SR-91 Interchange to Pioneer Blvd. Interchange	"SR-91" 895+01.60 to 956+25.29	1.16 Miles	1.16 Miles	2 Miles
13-3	Pioneer Blvd. Interchange to Norwalk Blvd. Interchange	"SR-91" 956+24.72 to 985+66.44	0.55 Mile	0.55 Mile	1 Mile
13-4	Norwalk Blvd. Interchange to Bloomfield Ave. Interchange	"SR-91" 985+66.44 to 1012+77.83	0.51 Mile	0.51 Mile	1 Mile
13-5	Bloomfield Ave. Interchange to Artesia Blvd. Interchange	"SR-91" 1012+77.83 to 1026+63.88	0.26 Mile	0.26 Mile	1 Mile

Design Feature Number 14 – Isolated Off-Ramps and Partial Interchanges: HDM Index 502.2 states “**Isolated off-ramps or partial interchanges shall not be used because of the potential for wrong-way movements.**”

Nonstandard Feature:

Nonstandard isolated off-ramps and partial interchanges are proposed at several locations, shown in Table 33 below:

Table 33: Nonstandard Isolated Off-ramps and Partial Interchanges

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
14-1	Studebaker Rd. WB Off-Ramp	"SR-91" 914+10.49	Partial interchange	Partial interchange	No isolated off-ramps or partial interchanges
14-2	Bloomfield Ave. WB On-Ramp	"SR-91" 1003+51.06	Partial interchange	Partial interchange	No isolated off-ramps or partial interchanges

Design Feature Number 15 – Ramp Lane Drop Taper: HDM Index 504.3 (1)(d) states “Depending on approach geometry and speed, the lane drop transition between the limit line and the 6-foot separation point should be accomplished with a taper of between 30:1 and 50:1 (longitudinal to lateral).”

Nonstandard Feature:

Nonstandard ramp lane drop tapers are proposed at several locations, shown in Table 34 below:

Table 34: Nonstandard Lane Drop Tapers

Nonstandard Feature-Location	Location	Station	Exist. Taper (Distance)	Prop. Taper (Distance)	Standard
15-1	Pioneer WB On-Ramp	PN-2" 56+74.22 to 61+24.22	N/A	15:1 (450')	30:1 (900')
15-2	Norwalk WB On-Ramp	"NW-2" 81+79.55 to 86+35.00	N/A	15:1 (455')	30:1 (900')
15-3	Bloomfield WB On-Ramp	"BL-1" 6+51.52 to 9+25.00	36:1	17:1 (273')	30:1 (480')
15-4	Artesia WB On-Ramp	AR-1" 20+11.21 to 25.04.34	43:1	20.5:1 (493')	30:1 (720')

Design Feature Number 16 – Distance Between Ramp Intersection and Local Road Intersection: HDM Index 504.3 (3) states “The minimum distance (curb return to curb return) between ramp intersections and local road intersections shall be 400 feet.”

Nonstandard Feature:

Nonstandard distance between ramp intersection and local road intersection are proposed at several locations, shown in Table 35 below:

Table 35: Nonstandard Distance Between Ramp Intersection and Local Road Intersection

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
16-1	Pioneer Blvd. WB SR-91 off-ramp to 167 th St.	"PN" 29+12.61 to 30+82.60	365'	170'	400'
16-2	Norwalk Blvd. WB SR-91 off-ramp to Cuesta Dr.	"NW" 27+23.17 to 30+95.56	372'	372'	400'
16-3	Norwalk Blvd. WB SR-91 off-ramp to Park St.	"NW" 27+23.17 to 28+11.30	88'	88'	400'

Design Feature Number 17 – Freeway-to-Freeway Connections - Shoulder Width: HDM Index 504.4 (4)(a) states “The width of shoulders on single-lane and two-lane (except as described below) freeway-to-freeway connectors shall be 5 feet on the left and 10 feet on the right. A single-lane freeway-to-freeway connector that has been widened to two lanes solely to provide passing opportunities and not due to capacity requirements shall have a 5-foot left shoulder and at least a 5-foot right shoulder.”

Nonstandard Feature:

Nonstandard freeway-to-freeway connections - shoulder widths are proposed at several locations, shown in Table 36 below:

Table 36: Nonstandard Connector Shoulder Widths

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
17-1	WB SR-91 to SB I-605 Connector Right Shoulder	"605-2" 95+62.70 to 97+42.10	8'	8'	10'
17-2	WB SR-91 to SB I-605 Connector Left Shoulder	"605-1" 98+13.67 to 99+26.24	2'	2'	5'

Design Feature Number 18 – Single-lane Connectors: HDM Index 504.4 (5) states “Single lane connectors in excess of 1,000 feet in length should be widened to two lanes to provide for passing maneuvers.”

Nonstandard Feature:

A nonstandard single-lane connector is proposed at the following location, shown in Table 37 below:

Table 37: Nonstandard Single-Lane Connector

Nonstandard Feature	Location	Station	Exist.	Prop.	Standard
18	WB SR-91 to SB I-605 Connector	N/A	2447' single lane connector	2447' single lane connector	Single Lane Connectors >1000' should be widened to two lanes

Design Feature Number 19 – Mainline Lane Reduction at Interchanges: HDM Index 504.6 states “The basic number of mainline lanes should not be dropped through a local service interchange.”

Nonstandard Feature:

Nonstandard mainline lane reduction at interchanges is proposed at several locations, shown in Table 38 below:

Table 38: Nonstandard Mainline Lane Reductions at Interchanges

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
19-1	NB I-605 Alondra Off-ramp	"I-605" 298+69.80 to 307+69.80	No Reduction	Drop 1 Lane	No Reduction
19-2	WB SR-91 Studebaker Off-ramp	"SR-91" 899+00.39 to 908+10.39	No Reduction	Drop 1 Lane	No Reduction

Design Feature Number 20 – Minimum Weave Length: HDM Index 504.7 states “The minimum weaving length, measured as shown in Figures 504.2A and 504.2B shall be 2,000 feet in urban areas, 5,000 feet outside urban areas, and 5,000 feet between freeway-to-freeway interchanges and other interchanges.”

Nonstandard Feature:

Nonstandard minimum weave lengths are proposed at several locations, shown in Table 39 below:

Table 39: Nonstandard Minimum Weave Length

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
20-1	I-605/SR-91 Interchange to Alondra Blvd. Interchange	"I-605" 282+27.94 to 294+69.56	1237'	1241'	5000'
20-2	I-605/SR-91 Interchange to Pioneer Blvd. Interchange	"SR-91" 924+10.39 to 949+41.11	1934'	3262'	5000'
20-3	Pioneer Blvd. Interchange to Norwalk Blvd. Interchange	"SR-91" 968+59.41 to 981+79.49	585'	1319'	2000'
20-4	Norwalk Blvd. Interchange to Bloomfield Ave. Interchange	"SR-91" 997+94.54 to 1006+44.95	485'	870'	2000'

Design Feature Number 21 – Access Control at Ramp Terminal: HDM Index 504.8 states “**Access rights shall be acquired along interchange ramps to their junction with the nearest public road. At such junctions, for new construction, access control should extend 100 feet beyond the end of the curb return or ramp radius in urban areas and 300 feet in rural areas, or as far as necessary to ensure that entry onto the facility does not impair operational characteristics. Access control shall extend at least 50 feet beyond the end of the curb return, ramp radius, or taper.**

For new construction or major reconstruction, access rights shall be acquired on the opposite side of the local road from ramp terminals to preclude driveways or local roads within the ramp intersection.”

Nonstandard Feature:

Nonstandard access control at ramp terminals are proposed at several locations, shown in Table 40 below:

Table 40: Nonstandard Access Rights at Ramp Terminals

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
21-1 (Underline Standard)	Pioneer Blvd. WB on/off-ramps	"PN" 26+53.06	0'	58'	>100'
21-2 (Underline Standard)	Pioneer Blvd. WB on/off-ramps	"PN" 29+84.04	250'	56'	>100'
21-3 (Underline Standard)	Pioneer Blvd. WB on/off-ramps	"PN" 30+15.95	292'	97'	>100'
21-4 (Bold Face Standard)	Pioneer Blvd. WB on/off-ramps	"PN" 26+94.96 & 27+55.31	0-25'	0-26'	>50'
21-5 (Bold Face Standard)	Pioneer Blvd. WB on/off-ramps	"PN" 29+50.56	212'	17'	>50'
21-6 (Bold Face Standard)	Pioneer Blvd. WB on/off-ramps	"PN" 28+31.79	N/A	Local Road Opposite Ramp	No Local Road Opposite Ramp
21-7 (Bold Face Standard)	Norwalk Blvd. WB on/off-ramps	"NW" 27+16.31	0'	0'	>50'
21-8 (Underline Standard)	Norwalk Blvd. WB on/off-ramps	"NW" 27+84.24	45'	45'	>100'

Design Feature Number 22 – Horizontal Clearance to Noise Barrier: HDM Index 1102.2 (1) states “**Minimum lateral clearances to noise barriers shall be as provided in Topic 309.1, Horizontal Clearances, of this manual, but shall not be less than 10 feet.**”

Nonstandard Feature:

Nonstandard horizontal clearance to noise barrier is proposed at the following location, shown in Table 41 below:

Table 41: Nonstandard Horizontal Clearance to Noise Barrier

Nonstandard Feature-Location	Location	Station	Exist.	Prop.	Standard
22	WB SR-91 Right Shoulder Between Pioneer and Norwalk Interchanges	"SR-91" 968+59.41 to 978+79.49	8'	8'	10'

5.A.2.3 Interim Features

There are no proposed interim improvements within the project limits.

5.A.2.4 High-Occupancy Vehicle (Bus and Carpool) Lanes

SR-91 features an existing High Occupancy Vehicle (HOV) lane in the westbound direction and an existing HOV lane in the eastbound direction. Vehicles with two or more persons can use HOV lanes. The existing HOV lanes are 12-foot-wide with a 1.5-foot-wide left median shoulder and no buffer between HOV lanes and mixed flow lanes. The Preferred Build alternative proposes a 1.5-foot-wide left median shoulder and 2-foot-wide buffer between the HOV lane and mixed flow lane on SR-91 WB.

HOV preferential on-ramp lanes exist on Pioneer Boulevard direct westbound on-ramp and Artesia Boulevard westbound on-ramp. The Build alternative proposes separate HOV preferential lanes on Pioneer Boulevard westbound on-ramp, Norwalk Boulevard westbound on-ramp and Artesia Boulevard westbound on-ramp.

The HOV ingress/egress location in the project limits on westbound SR-91 is located closer than standard to the I-605 Connector exit. This causes vehicles to merge across several lanes in a short distance to exit at the I-605 Connector. The HOV ingress/egress location has been discussed with the District 7 Managed Lanes Division and will be moved eastward (upstream) with this project for improved safety and traffic operations.

5.A.2.5 Ramp Metering

For the Build Alternative, ramp metering will be provided on all on-ramps, as they currently exist along the SR-91 project limits. Maintenance vehicle pullouts will be provided for accessing controller cabinets. Fiber optic communication to each controller cabinet will be included. Controller cabinet setup will incorporate hardware and software for communication.

5.A.2.6 California Highway Patrol (CHP) Enforcement Areas

For the Build Alternative, CHP enforcement areas will be provided on all on-ramps. No mainline CHP enforcement area will be provided within the project limits. A meeting was conducted on March 19, 2018 at Caltrans District 7 with CHP and the Caltrans Managed Lanes Branch to discuss CHP enforcement areas proposed on this project. CHP concurred with the proposed CHP enforcement areas on the on-ramps and that no mainline median enforcement areas will be provided.

5.A.2.7 Park and Ride Facilities

No existing Park and Ride Facilities are located within the project limits, nor are any new Park and Ride Facilities proposed with this project. The Caltrans District 7 Park and Ride Coordinator has been consulted and concurred with this approach.

5.A.2.8 Utility and Other Owner Involvement

There are existing utility facilities within the proposed project limits. The following agencies/companies have utilities that are located within or adjacent to the existing State right-of-way within the proposed project limits:

- Central Basin Municipal Water District – Water
- Charter Communications – Telecom
- Chevron Pipeline Company – Oil
- City of Cerritos – Water, Sewer
- City of Norwalk – Water, Sewer
- Crimson Pipeline – Oil
- Crown Castle – Telecom
- Defense Fuel Support Point – Oil
- Frontier Communications – Telecom
- Golden State Water – Water
- Kinder Morgan Inc. – Oil
- Liberty Utilities – Water
- Los Angeles County Department of Public Works – Sewer
- Los Angeles County Sanitation District – Sewer
- Shell Oil Pipeline Company – Oil
- Southern California Edison – Power
- Southern California Gas – Gas
- Time Warner Cable – Telecom
- Wilshire Connection LLC – Telecom
- XO Communication – Telecom

Coordination with the utilities of the affected facilities occurred throughout the PA/ED phase and will be continued through the PS&E phase to further define relocation strategies, project requirements, and to identify and develop utility agreements. Conflicts with the existing utilities should be potholed during the PS&E phase to accurately identify existing locations and to assess impacts definitively. Notice to owners and utility agreements will be sent out to the affected utility companies during the PS&E phase.

Anticipated utility relocations are shown in the Right of Way Data Sheet in Attachment C. Project utility impacts are expected to include the following facilities:

- Power poles at various locations, owned by SCE
- Underground electrical and telecommunication conduits at various locations
- Gas lines in various locations
- Fire hydrants and waterlines in various locations

5.A.2.9 Railroad Involvement

The proposed project does not impact any existing railroads.

5.A.2.10 Highway Planting

Highway planting of disturbed areas is proposed with the project. Disturbed areas and slopes will be planted and irrigated. The City of Cerritos has a six-inch recycled waterline in Pioneer Boulevard that runs through the project limits. This may be a viable source of irrigation for planting within Caltrans Right of Way.

5.A.2.11 Erosion Control

The existing small slopes are stable and vegetated with native plants. Where such existing vegetated areas can be feasibly preserved, they will be; otherwise, where disturbance is unavoidable, the disturbed vegetation will be replaced with an erosion control mix prior to replacement highway planting and irrigation being installed. Erosion control measures shall be applied at disturbed soil areas after grading operations are completed. Specific erosion control measures will be coordinated with the Caltrans District staff during the PS&E phase of the project.

During construction activities, sediments in stormwater discharges will be controlled by implementing appropriate temporary construction BMPs. These measures will be detailed in the Storm Water Pollution Prevention Plan (SWPPP) which will be prepared for the construction phase of the project. Standard construction site BMPs (such as gravel bag berms, temporary fiber rolls, etc.) will be utilized during construction to minimize storm water pollution.

5.A.2.12 Noise Barriers

Eight existing soundwalls are located along SR-91 WB and eight existing soundwalls are located along SR-91 EB within the project limits. Traffic noise was modeled and evaluated for potential noise impacts in Noise Study Report (NSR). The NSR is summarized in Section 6H.

Existing soundwalls impacted by the freeway widening will be removed and reconstructed at the new edge of shoulder location with the same top of wall elevation as the existing soundwall. Two new soundwalls are proposed to be installed with this project.

The first new soundwall (Soundwall 2.2b) which is a new 1,330 foot-long soundwall on the north side of the SR-91 WB to I-605 Connector and will extend across the SR-91W/I-605

N&S Connector (Bridge No. 53-1707F) over Studebaker Road and will have 11 benefitted receptors in the City of Cerritos. This soundwall is proposed to be 16' in height.

The second new soundwall (soundwall 6.1) will be approximately 355 feet in length on the south side of the freeway along eastbound SR-91 east of Bloomfield Overcrossing at the Aria and Sage Apartment Buildings within the City of Cerritos. This soundwall will be 14' in height.

5.A.2.13 Non-motorized and Pedestrian Features

The project study area is located between two major bike trails in the region. The San Gabriel River Bicycle Path runs 30.2 miles along the San Gabriel River, from San Gabriel Canyon Road in the City of Azusa to the access into El Dorado Park in the City of Long Beach. There are numerous access points along the path. Within the project area, it crosses under SR-91 just west of I-605, which it parallels for much of its length.

The Coyote Creek Bicycle Path is a 9.5-mile Class I bike path adjacent to the Coyote Creek flood control channel, extending from the City of Santa Fe Springs to the City of Long Beach, where it joins the San Gabriel River Bicycle Path. It crosses under SR-91 about one mile east of the project area, at Carmenita Road.

Other bicycle infrastructure in the project study area are listed below.

- A Class III bikeway extends in both directions on 195th Street from the San Gabriel River Trail to Bloomfield Avenue. These bike lanes then transition to a Class II bikeway before joining the Coyote Creek Bicycle Path.
- A Class II bikeway extends south on Pioneer Boulevard from South Street before turning eastward onto Del Amo Boulevard.
- A Class II bikeway extends south on Bloomfield Avenue starting at 183rd Street and ends at South Street, before continuing east on South Street to Carmenita Avenue, where a branch extends southward on Shoemaker Avenue.
- A Class II bikeway exists on Carmenita Avenue between 166th Street and W. Cerritos Avenue. Please note that Carmenita Avenue turns into Moody Street along southern segments of this bike path.

5.A.2.14 Needed Roadway Rehabilitation and Upgrading

Pavement rehabilitation is not part of the purpose and need of the project.

5.A.2.15 Needed Structure Rehabilitation and Upgrading

Based on the findings of the Caltrans Maintenance Reports or subsequent field reviews, some rehab may be required such as crack repair, barrier/Midwest Guardrail System repair, spall or other repairs as identified. Routine maintenance and rehabilitation needs identified in the Caltrans Maintenance Reports will be addressed as a part of the project.

5.A.2.16 Cost Estimates

A detailed cost breakdown for the Build Alternative is included in Attachment B. The total construction capital cost has been escalated to Year of Expenditure (YOE) FY 2022. Table 42 summarizes the construction capital costs which does not include the Total Capital Outlay Support Cost.

Table 42: Project Cost Estimates – Year 2022

Construction Element	Build Alternative	Build Alternative with Design Option 1 & 3 (Preferred Alternative)
Roadway	\$88,200,000	\$85,300,000
Structures	\$24,000,000	\$20,000,000
Right-of-Way	\$28,400,000	\$16,100,000
Total	\$140,600,000	\$121,400,000

5.A.2.17 Right-of-Way Data

A Right-of-Way Data Sheet has been prepared for the Build Alternative and Preferred Build Alternative (including Design Option 1 and 3), and is included in Attachment C, which includes a cost estimate for right-of-way acquisition and utilities relocation. See the Geometric Drawings in Attachment G, H, I and J that show R/W acquisition areas.

5.A.2.18 Effect of Projects-Funded-by-Others on State Highway

The proposed project is funded by County of Los Angeles Measure R sales tax funds, which are administered by Metro. However, both State and federal environmental reviews are conducted in case federal funds are programmed in the future.

5.B REJECTED ALTERNATIVES

A feasibility study was conducted for Metro and the GCCOG for this section of I-605 and SR-91 between 2011 and 2012, which became the SR-91 / I-605 / I-405 Congestion Hot Spots Feasibility Report (Feasibility Report). Three Geometric Plan Concepts were studied in the feasibility study and were carried forward for more detailed evaluation in the PSR-PDS phase. During preparation of the PSR-PDS, the three Build Concepts were evaluated, Concept A and C were carried forward for further evaluation in this Project Report. Descriptions of the rejected alternatives are provided below.

Concept B (PSR-Alternative 2)

Concept A, B and C have similar proposed improvements. However, Concept B's geometry design including a braided ramp between Bloomfield Avenue and Norwalk Boulevard affects more properties adjacent to Caltrans right-of-way, and has more environmental and economic impacts. Therefore, Alternative B was dropped from further consideration.

6. CONSIDERATIONS REQUIRING DISCUSSION

6.A Hazardous Waste

A Phase I Initial Site Assessment (ISA) has been prepared. The purpose of this Phase I ISA is to identify sites that have the potential to affect the proposed project with hazardous materials or waste from current or historical environmental conditions. The assessment of the Phase I ISA includes a site description, regional and site specific geology and hydrogeology, the type of operations and chemicals used, contaminants detected in all media sampled, maps, figures, cross-sections showing location of borings, soil vapor probes, and groundwater monitoring wells, contaminant source areas, lateral and vertical extent of contamination, summary of analytical results, remedial actions, and any other information available from the regulatory agency's files or records from other sources including interviews with knowledgeable parties as applicable/available. This Phase I ISA

is in general conformance with the scope and limitations of ASTM Practice (E 1527-13) where applicable.

Based on the documentation review and site visit conducted as part of the Phase I ISA, implementation of the recommendations outlined below as well as federal, state, and local laws and regulations, including Caltrans Standard Specifications and Special Provisions during construction, no further Preliminary Site Investigation is necessary at this time.

The following recommendations are based on the findings, opinions, and conclusions noted during the course of the Phase I ISA and will be included in the Environmental Commitments Records (ECR) of the environmental document.

- Potential Hazardous Materials Sites
- Four potential hazardous materials sites (REC) and one historic hazardous materials site (HREC) within or immediately adjacent to the project study area were identified during the regulatory database search and site reconnaissance. Additional investigation for potential impacts from historical or current conditions at those properties is recommended where impacted soil and/or groundwater may be exposed as a result of construction activities. Focused ISAs and Site Investigations (SI) are required for all commercial/industrial properties proposed for partial/full acquisition and any necessary property rights, including fees, highway easements, utility easements and/or TCEs, associated with the property. For all off-site REC properties identified as potentially impacting the proposed project, focused ISAs and SIs are required within the project area potentially impacted by the off-site REC property. The focused ISAs and SIs would be conducted during the PS&E (design) phase of the project development per Caltrans requirements. Further investigation is not considered warranted at this time.
- Asbestos and Lead Based Paint
- Asbestos containing building materials/asbestos containing materials (ACBM/ACM) were used in construction until the late 1970s. Various structures were constructed along the project study area prior to their discontinued use. Areas of concern associated with the proposed project include existing residential and commercial buildings, and possibly bridges (overpasses).
- Various structures were constructed along the project study area prior to the discontinued use of Lead Based Paint (LBP). Areas of concern associated with the proposed project include existing residential and commercial buildings, and possibly bridges (overpasses) as well as traffic striping materials.
- The Preferred Alternative will require improvements to the following bridges: Studebaker Road (both the SR-91 mainline Undercrossing [Br. No. 53-1706] and the westbound SR-91 to I-605 Connector Undercrossing [Br. No. 53-1707F]), Gridley Road Overcrossing (Br. No. 53-1324), Pioneer Boulevard Undercrossing (Br. No. 53-1335), Norwalk Boulevard Undercrossing (Br. No. 53-1334), and Bloomfield Avenue Overcrossing (Br. No. 53-1433). ACM/LBP surveys are required for all bridges proposed for improvement.
- The Pioneer Boulevard Westbound Ramps/168th Alignment Design Option would result in five residential displacements. Based on the construction

dates of these structures, ACMs and LBP may be present. ACMs and LBP represent a concern during demolition of these structures and will require inspection and/or sampling for ACBM/ACM prior to demolition.

- Yellow traffic paint used prior to 1997 in District 7 contained high concentrations of lead. However, application of yellow thermoplastic material containing high concentrations of lead was phased out during 2004 to 2006. The lead concentrations in the older yellow paint and yellow thermoplastic are high enough to make these materials hazardous wastes when they are removed. Old non-yellow paints (e.g. white, blue, black, etc.) had higher concentrations of lead but not high enough for removed paint to be classified as a hazardous waste. Residue from the removal of these paints is a non-hazardous waste. Removal of all yellow, non-yellow thermoplastic-painted and lead-based painted traffic stripes/pavement marking shall be managed during construction, following Caltrans SSPs.
- Polychlorinated Biphenyls
- Polychlorinated Biphenyls (PCBs) were used in the past as insulating oils in electrical transformers, fluorescent light ballast, and/or as hydraulic oils in elevator equipment prior to the 1980s. Twenty-one electrical distribution transformers (both ground-mounted and utility pole mounted) are present within the project study area along the north side of SR-91 and east side of I-605. Of these, eight are located over bare soil and one is located partially. Prior to site disturbance activities, the soil beneath transformers that are located over bare soils should be sampled for PCBs.
- Aerially Deposited Lead (ADL)
- Based on the time-period of construction of SR-91 and I-605, the project study area was exposed to the deposition of ADL and subsequent soil sampling has confirmed this at two locations. Analysis of the soil indicates that concentrations of Lead exceed STLC regulatory limits and will need to be handled and disposed as potentially hazardous waste in California. All unpaved areas proposed for disturbance during construction activities will require an ADL SI to be implemented during the PS&E phase of the proposed project development.
- Pesticides
- Based on the historical use of many areas within or in the vicinity of the project study area as agricultural land, soils within the project limits may be impacted by pesticides. During original construction of SR-91 and I-605, it is likely that these activities will have reduced the likelihood of potential pesticide contamination in many areas. While limited soil excavation is planned, where un-paved areas will experience soil disturbance, investigation of the soil for pesticides is recommended as part of the Phase 2 Site Investigation during the PS&E phase of the proposed project development.
- Treated Wood Waste (TWW)
- It is anticipated that TWW, associated with sign post and guard rail removals, would be generated during the proposed project construction. Sign posts and/or guard rails are located along the main roadway right-of-way, and at on- and off-ramps and transition roads.

6.B Value Analysis

Based on the total project cost estimate of \$141 million which is above the \$50 million threshold requirement, and per Chapter 19 of the Project Development Procedures Manual (PDPM), a Value Analysis (VA) is required for the proposed project. A project-specific VA was conducted on July 31, 2017 through August 3, 2017. A total of ten VA design modifications were considered. Of the ten proposed VA alternatives, three were accepted. The following are the accepted VA design modifications:

- Design Modification 2.0 - Use precast bridge members in lieu of cast-in-place. The VA alternative proposes to use precast girders in lieu of cast-in-place for two full bridge replacements at Bloomfield Avenue and Gridley Road to reduce construction time. The main benefit of this VA alternative is to reduce construction time by approximately 2 months. There would be less impact to the Ecology Park for the Gridley Road Bridge replacement because the profile of the bridge would be lower and require less grading. The span lengths are within the range of typically available pre-cast girders.
- Design Modification 6.0 - Construct the soundwall along the north side of the westbound SR 91 to the I-605 connector at the edge of shoulder and protect in place the right of way wall at the right of way line. The main benefit of this concept is that it will reduce construction costs because the soundwall will not be as high as in the baseline concept; an approximate 4-foot reduction is expected. The other advantage of this concept is that it avoids temporary construction easements required from private property owners along the right of way line. The soundwall proposed in this alternative could reduce roadway noise that reaches residents because its new location will better enable it to abate noise.
- Design Modification 8.0 - Eliminate the retaining wall east of Bloomfield Avenue and re-grade the nearby drainage channel. The main benefit of this VA alternative is to reduce construction costs for a 1,200-foot retaining wall. This VA alternative was applicable for Alternative 2 only and is not applicable to the Preferred Alternative.

6.C Resource Conservation

The proposed project would not cause an increased demand for water, except for minor amounts during construction. Therefore, the project would not have a significant impact to the public water supply.

Recycling and stockpiling of the removed existing asphalt concrete and Portland Cement Concrete pavement will be determined during final design. The traffic signs identified for removal would be removed and salvaged by the contractor to become State property available for recycling.

The Build Alternative involves no planned use of natural resources beyond fuel and energy needed during construction and maintenance activities, including the materials needed for construction that require energy to produce and transport them to the project site. However, the energy expenditure to construct the Build Alternative would be off-set by the reduction in fuel consumption realized through more efficient freeway operations. The Build Alternative would not result in adverse impacts related to energy consumption in the Study Area or region compared to the No Build Alternative. No avoidance, minimization, or mitigation measures are required.

6.D Right-of-Way Issues

Right-of-Way Requirements (Build Alternative – Alternative 2)

A Right-of-Way Data Sheet has been prepared and included in Attachment C for the improvements proposed in the Build Alternative (Alternative 2). The proposed project is mostly within existing Caltrans right-of-way. For the Build Alternative (Alternative 2), right of way required for acquisition includes approximately 89,290 square feet of Temporary Construction Easement (TCE), 640 square feet of Permanent Easement and 109,388 square feet of Fee Acquisition. The impacted properties generally consist of Commercial, Industrial, Residential, School, Park, and city owned property types, impacting approximately 84 assessor's parcel lots.

APN 7014-004-032 (16905 Pioneer Blvd / Denny's Restaurant and Quality Inn & Suites) – For Build Alternative (Alternative 2), and Design Option 2 - Type L-9 Interchange at Pioneer Boulevard, the proposed improvements impact the entire driveway during construction. The proposed new driveway can be constructed in two phases (i.e. half at a time) and access maintained during construction. Potential damages to the business due to temporary loss of use of a portion of the driveway during construction are included in the valuation estimation. Also, the monument sign may need to be relocated and will be determined during the PS&E phase.

APN 7014-004-005 (16809 Pioneer Blvd / Arco Gas Station) – The Arco gas station southern driveway on Pioneer Boulevard is too close to SR-91 WB off-ramp intersection, and it presents potential traffic and safety issues for ramp and Pioneer Boulevard operations. This Arco driveway will be closed for the Build Alternative (Alternative 2). Environmental remediation of hazardous waste is expected to be necessary.

170th Street properties (north of SR-91 between Pioneer Blvd and Norwalk Blvd) – Acquisition of 18 residential and 1 business properties on 170th street east of A J Padelford Park is needed for Alternative 2. The SR-91 mainline is widened to a standard lane and shoulder width configuration directly impacting 170th Street. Thus, 170th street would be closed permanently due to its already non-standard width and residences and the business on 170th street would be acquired.

APN 7012-001-901 (12222 Cuesta Dr. / Tracy High School and ABC Adult School) - Due to the proposed road improvements along Norwalk Boulevard, the partial acquisition eliminates approximately 26 parking stalls of Tracy High School. During the PA/ED phase a preliminary plan for restriping/reconfiguration of the parking area to recoup all the lost parking stalls and provide sufficient fire access/traffic circulation was prepared. In the PS&E phase it will be arranged for this parking lot reconfiguration work to take place prior to the project construction start date to avoid parking/fire access issues and replenish the lost stalls prior to the commencement of any school session.

Although right of way is not required from the condos along Judy Way and Rancho Vista Drive (approximately 32 units), located in the City of Cerritos west of Bloomfield Avenue, the area required from the back alley along the SR-91 to construct the freeway, temporarily eliminates vehicle access to the condo's garages, thus creating a loss of vehicular access during construction. Approximately 6 feet from the face of the condos will be provided for pedestrian access to the buildings during construction of the project. Full vehicular access will be restored upon project construction completion.

Right-of-Way Requirements for Preferred Alternative (Build Alternative – Alternative 2 with Design Option 1 – Reduced Lane/Shoulder Width and Design Option 3 - Pioneer Blvd WB Ramps/168th St Alignment)

A Right-of-Way Data Sheet for Alternative 2 with Design Option 1 – Reduced Lane/Shoulder Width has been prepared and included in Attachment C. Right of way required for acquisition includes approximately 25,000 square feet of Temporary Construction Easement (TCE), and 49,000 square feet of Fee Acquisition. The impacted properties generally consist of Commercial, Industrial, Residential, School, Park, and city owned property types, impacting approximately 25 assessor's parcel lots.

APN 7014-004-032 (16905 Pioneer Blvd / Denny's Restaurant and Quality Inn & Suites) – For Build Alternative – Alternative 2 with Design Option 1, the proposed improvements impact the entire driveway during construction. The proposed new driveway can be constructed in two phases (i.e. half at a time) to maintain access during construction. Potential damages to the business due to temporary loss of use of a portion of the driveway during construction, and permanent left turn access restrictions for the driveway are included in the valuation estimation. Also, the monument sign may need to be relocated and will be determined during the PS&E phase.

APN 7011-004-008, 7011-004-051, 7011-004-055, 7011-004-069, 7011-004-070, 7011-004-076, 7011-004-902, and 7011-004-903 – As part of Design Option 1, the inclusion of Design Option 3 – Pioneer WB Ramps/168th Street Alignment impacts eight (8) parcels on 168th Street east of Pioneer Boulevard due to the realignment of the SR-91 westbound off-ramp at Pioneer Blvd to connect with 168th Street. These impacts are such that full right of way acquisition of these 8 parcels will be required.

APN 7011-005-902 (16712 1/2 Pioneer Blvd) – The existing driveway will be within the State access control limits and will be identified as a design exception. Assumed access is maintained during construction and in the after condition. Parking may need to be re-stripped/reconfigured to recoup some of the lost stalls and sufficient fire access provided during construction and in the after condition.

APN 7011-005-901, 7011-005-903 (11817 & 11825 168th St) – It is planned for a shared driveway to be provided to access these parcels off a new cul-de-sac for the termination of 168th Street.

APN 7012-001-901 (12222 Cuesta Dr / Tracy High School and ABC Adult School) - Due to the proposed road improvements along Norwalk Boulevard, the partial acquisition eliminates approximately 26 parking stalls of Tracy High School. During the PA/ED phase a preliminary plan for restriping/reconfiguration of the parking area to recoup all of the lost parking stalls and provide sufficient fire access/traffic circulation was prepared. In the PS&E phase it will be arranged for this parking lot reconfiguration work to take place prior to project construction start date to avoid parking/fire access issues and replenish the lost stalls prior to the commencement of any school session.

Relocation Impact Studies

A Relocation Impact Report has been prepared by Michael Baker International. The Preferred Alternative – Alternative 2 including Design Option 1 and Design Option 3 – would result in five residential displacements within the City of Artesia near the Pioneer Boulevard westbound off ramp. At this time, a number of suitable replacement residential properties are available for purchase or lease within the project area. The housing stock available in the project area, as well as neighboring communities, will be sufficient for finding comparable replacement dwellings. It is anticipated that finding replacement

housing for owner or tenant-occupied residences will not present any unusual problems. There is no indication at this time that there will be unusually slow relocations.

Airspace Lease Areas

The proposed project is not in an area of high land values having potential for future airspace leases.

6.E Environmental Compliance

The Westbound SR-91 Improvement Project is funded by County of Los Angeles Measure R sales tax funds, which are administered by Metro. However, both state and federal environmental reviews are conducted in case federal funds are programmed in the future. Under Measure R, \$590 million has been set aside for the I-605 "Hot Spots" Program. The project cost is estimated at \$121 million and will be listed as an Early Action priority. Metro has been awarded \$32 million in 2018 Trade Corridor Enhancement Program (TCEP) funds by the California Transportation Commission (CTC) to design and construct the project. California participated in the Surface Transportation Project Delivery Pilot Program (Pilot Program), pursuant to 23 United States Code (USC) 327, for more than 5 years, beginning July 1, 2007, and ending September 30, 2012. The Moving Ahead for Progress in the 21st Century Act (MAP-21 [P.L. 112-141]), signed by President Barack Obama on July 6, 2012, amended 23 USC 327 to establish a permanent Surface Transportation Project Delivery Program. As a result, Caltrans entered into a Memorandum of Understanding (MOU) pursuant to 23 USC 327 (NEPA Assignment MOU) with FHWA. The NEPA Assignment MOU became effective October 1, 2012, and was renewed on December 23, 2016, for a term of 5 years. In summary, Caltrans continues to assume FHWA responsibilities under NEPA and other federal environmental laws in the same manner as was assigned under the Pilot Program, with minor changes. With NEPA Assignment, FHWA assigned and Caltrans assumed all of the United States Department of Transportation (USDOT) Secretary's responsibilities under NEPA. This assignment includes projects on the State Highway System and Local Assistance Projects off of the State Highway System within the State of California, except for certain categorical exclusions (CE) that FHWA assigned to Caltrans under the 23 USC 326 CE Assignment MOU, projects excluded by definition, and specific project exclusions.

The proposed project is listed in Amendment #3 to the 2016 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) with Project ID 1163S012. The 2016 RTP was approved by the Regional Council of the Southern California Association of Governments (SCAG) on April 7, 2016, and Amendment #3 was adopted in December 2018. The proposed project is currently programmed in the 2019 Federal Transportation Improvement Program (FTIP) with Project ID LA0G1119. The 2019 FTIP was approved by the SCAG on September 6, 2018.

Wetlands and Other Waters

The proposed project drains to San Gabriel River Reach 1, Artesia-Norwalk Drain and Coyote Creek, which are impaired according to the 2012 303(d) list of waterbody impairments (Ammonia, Coliform Bacteria, Diazinon, Dissolved Copper, Indicator Bacteria, Lead, pH, Selenium and Toxicity), and have Total Maximum Daily Loads (TMDLs) established (Ammonia, Coliform Bacteria, Diazinon, Dissolved Copper, Indicator Bacteria, Lead, pH, Selenium and Toxicity). Caltrans is named as a stakeholder in the San Gabriel River TMDL for Copper, Lead, Zinc and Selenium.

During the construction phase of the proposed project, sediment will be exposed, and construction activities will potentially impact downstream waterbodies. Therefore,

temporary erosion control measures will be implemented to retain soil and sediment. In addition, devices that will address the anticipated post-construction priority pollutants from the proposed project will be installed to mitigate impacts from the proposed project on downstream waterbodies.

Build Alternative (Alternative 2) Disturbed Soil Area will be 29.25 acres. Preparation of a Stormwater Pollution Prevention Plan (SWPPP) will be required, and the SWPPP will be implemented during construction of the proposed project. The SWPPP identifies the specific best management practices (BMPs) that will be implemented during construction of the proposed project. The BMPs proposed as a part of the proposed project would be implemented per the technology requirements as stipulated in the NPDES Construction General Permit (CGP) and Caltrans' NPDES Permit. In the event that groundwater and any other non-stormwater dewatering are necessary during construction, these activities are subject to the Los Angeles Regional Water Quality Control Board's (RWQCB) Order No. R4-2012-0175-A01 (NPDES Permit Number CAS004001). A separate permit may be required if dewatering is necessary.

The proposed project's Build Alternative (Alternative 2) will increase the impervious area by 5.83 acres within the proposed project boundary, which will increase the amount of runoff from SR-91 and I-605. The potential long-term impacts to water quality from implementing the proposed project will include an increase in runoff from the increase in impervious surfaces, which will result in an increase in the concentrations of general pollutants. As part of Caltrans' Stormwater Program and described in their Stormwater Management Plan and Project Planning and Design Guide, structural and non-structural source control BMPs will be incorporated into the design of the proposed project. Approved structural treatment BMPs could include, but are not limited to, Design Pollution Prevention (DPP) Infiltration Areas, Infiltration Devices, and Biofiltration Swales and Strips. The selection of specific BMPs is also subject to identifying suitable locations. In order to develop the proposed project, permission must be obtained from agencies that have jurisdictional authority over waterbodies that may be impacted by the proposed project, including the following:

- State Water Resources Control Board's General Construction Permit,
- Los Angeles Regional Water Quality Control Board's Section 401 Certifications,
- California Department of Fish and Wildlife's Streambed Alteration 1602 Agreement,
- United States Army Corps of Engineers' Section 404 Permit.

With the implementation of Environmental Commitment Measures, the proposed project's construction, design, and facility operation will result in no adverse impacts to water quality.

Natural Environment

A Natural Environment Study (NES) was approved by Caltrans on September 14, 2017. The results presented in this NES (Minimal Impacts) are based on recent literature searches, a jurisdictional delineation, a general biological resources survey, and a bat habitat suitability assessment conducted in 2017. The project includes a biological study area (BSA) of 283 acres that is primarily composed of developed areas, with some ornamental and weedy vegetation, and has low biological value to native plant and wildlife species.

A formal jurisdictional delineation survey was completed in 2017. It determined that 14 drainage features, potentially subject to the jurisdiction of the United States Army Corps

of Engineers (USACE), the California Department of Fish and Wildlife (CDFW), and Regional Water Quality Control Board (RWQCB), occur in the BSA. The project will likely require authorizations from the USACE (pursuant to Section 404 of the Clean Water Act [CWA]), the RWQCB (pursuant to Section 401 of the CWA), and the CDFW (pursuant to Section 1602 of the California Fish and Game Code).

A total of 12 special-status species (3 plants and 9 animals) federally or State-listed as threatened or endangered were listed as having the potential to occur within the BSA. An additional 81 non-listed special-status species were considered for their potential to occur in the vicinity of the BSA. The full list of special-status species consists of those species listed as endangered or threatened, those proposed to be listed, or those considered to be special-status species potentially occurring or known to occur within and in the vicinity of the BSA. No federally or State-listed as threatened or endangered species have the potential to occur in the BSA due to the lack of suitable habitat. Five California Special Animals have the potential to occur in the BSA, but the project is anticipated to have no effect on special-status species with the implementation of the proposed avoidance and minimization measures. The project is also anticipated to have no effect on critical habitat or natural communities of concern, as none were identified in the BSA. Therefore, Federal Endangered Species Act (FESA) Section 7 consultation between Caltrans and the USFWS or the National Marine Fisheries Service (NMFS) will not be necessary to obtain authorization for potential adverse effects to federally listed species. Fish and Game Code Section 2081 authorization from the CDFW will not be required for effects to State-listed species, and no compensatory mitigation will be required for impacts to special-status species.

Due to the presence of suitable nesting bird habitat, to avoid potential effects to fully protected raptors and other nesting birds protected by the Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code, a survey for active bird nests is recommended within 3 days prior to commencement of vegetation removal and construction activities during the bird nesting season (typically January through August).

Invasive species would be removed from the project work area and controlled during construction to ensure compliance with Executive Order 13112.

Visual/Aesthetics

Most existing planting within the project limits are ornamental, including native species which were introduced as part of landscape plantings. Existing landscaping that will be removed or disturbed by construction activities will be replanted as part of the project. The planting palette will be developed and agreed upon in the PS&E phase with review and concurrence by Caltrans, Metro, City of Cerritos and City of Artesia. The City of Cerritos has requested enhanced landscaping within their City limits, consistent with the SR-91 corridor in other areas of the City.

The bridge widenings and replacements of this project provide another opportunity to improve the visual character of the freeway and interchanges. Structure aesthetic patterns will be developed during the PS&E phase. This will include aesthetic patterns on bridge railings, concrete retaining walls, and masonry block soundwalls.

Section 4(f)

The study area includes the area within maximum disturbance limit (MDL) and a 0.5 mile buffer around the MDL. There are no wildlife or waterfowl refuges in the study area. The analyzed resources are bike paths, parks, recreational facilities, and schools. Resources located within 0.5-mile of the proposed SR-91 Project improvements were evaluated to

assess constructive use, and whether any project-related effects would result in proximity impacts that, after mitigation, would be so severe that the activities, features, and/or attributes that qualify those properties for protection under Section 4(f) would be substantially impaired. Substantial impairment occurs when the activities, features, and/or attributes of the property are substantially diminished resulting in the value of the resource, in terms of Section 4(f) significance, being meaningfully reduced or lost.

The preferred alternative would result in a use of the following properties, but with project features incorporated into the project, the project would not adversely affect the activities, features, and attributes that qualify the properties for protection under Section 4(f):

- Ecology Park (City of Cerritos)
- Tracy High School (ABC Unified School District)

Because the project would not adversely affect the activities, features, and attributes that qualify the properties for protection under Section 4(f), Caltrans has determined that the project would result in a de minimis impact on Ecology Park and “No Use” impact on Tracy High School since no recreational facilities of the school will be impacted by the project.

6.F Air Quality Conformity

Historical air quality data show that existing carbon monoxide (CO) levels for the project area and the general vicinity do not exceed either the State or federal ambient air quality standards. The proposed project would help improve traffic flow and reduce congestion on roadway links in the project vicinity. The project is located in an attainment/maintenance area for federal CO standards. Using the California Department of Transportation (Caltrans) Transportation Project-Level Carbon Monoxide Protocol, a screening CO hot spot analysis was conducted to determine whether the proposed project would result in any CO hot spots. It was determined that the proposed project would not result in any exceedances of the 1 hour or 8-hour CO standards.

The proposed project falls under the jurisdiction of the South Coast Air Basin (SCAB). The SCAB is in a nonattainment area for federal particulate matter less than 2.5 microns in size (PM_{2.5}) and in attainment/maintenance for federal particulate matter less than 10 microns in size (PM₁₀) standards. Therefore, per 40 Code of Federal Regulations (CFR), Part 93, analyses for conformity purposes are required for the project.

The United States Environmental Protection Agency (EPA) does not require hot-spot analyses, qualitative or quantitative, for projects that are not listed in 40 CFR, Section 93.123(b)(1), as an air quality concern. A PM_{2.5}/PM₁₀ hot-spot analysis was submitted to the Transportation Conformity Working Group (TCWG) for review. On October 23, 2018, the TCWG determined that the project is not a project of air quality concern.

Compliance with the 2015 Caltrans Standard Specifications and the South Coast Air Quality Management District (SCAQMD) Rules and Regulations during construction will reduce construction-related air quality impacts from fugitive dust emissions and construction equipment emissions.

The proposed project would not generate new vehicular traffic trips because it would not construct new homes or businesses. However, there is a possibility that some traffic currently using other routes would use the new facilities, thus resulting in increased vehicle miles traveled (VMT) in the project area. The Build Alternative would result in higher criteria pollutant and greenhouse gas (GHG) emissions in the project area when compared to the No Build Alternative conditions.

The proposed project is required to include an analysis of Mobile Source Air Toxics (MSAT) as part of the National Environmental Policy Act (NEPA) process for highways. It is expected that there would be similar MSAT emissions in the study area under the Build Alternative relative to the No Build Alternative in the design year (2044) in the project area.

The project is in Los Angeles County, which is among the counties listed as containing serpentine and ultramafic rock. However, the portion of Los Angeles County in which the project lies is not known to contain serpentine or ultramafic rock. Therefore, the impact from naturally occurring asbestos during project construction would be minimal to none.

The proposed project is listed in Amendment #3 to the 2016 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) with Project ID 1163S012. The 2016 RTP was approved by the Regional Council of the Southern California Association of Governments (SCAG) on April 7, 2016, and Amendment #3 was adopted in December 2018. The proposed project is programmed in the 2019 Federal Transportation Improvement Program (FTIP) with Project ID LA0G1119. The 2019 FTIP was approved by the SCAG on September 6, 2018.

The proposed Build Alternative is included in the regional emissions analysis that was used to meet regional air quality conformity. The FHWA conducted its determination that the project conforms with the State Implementation Plan (SIP) in accordance with 40 CFR, Part 93. Construction and long-term operation of the project would be considered consistent with the purpose of the SIP, and the project Build Alternative would conform to the requirements of the federal Clean Air Act (CAA).

6.G Title VI Considerations

Caltrans and FHWA policies demonstrate a commitment to Title VI of the Civil Rights Act, which provides that no person in the United States shall, on the grounds of race, color, national origin, sex, disability, or age be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program or activity receiving federal financial assistance.

6.H Noise Abatement Decision Report

A traffic noise model was prepared and the results presented in the Noise Study Report. The traffic noise model was used to predict noise levels for the existing and the future No Build Alternative, Build Alternative (Alternative 2), and the Diamond Ramps Design Option 4.

Short-term noise level measurements at 61 outdoor locations were used to calibrate the noise prediction model with concurrent traffic counts and observed vehicle speeds. A total of 362 representative existing receptors were modeled and evaluated for potential noise impacts resulting from traffic noise. Noise abatement measures were evaluated for receptors within the project limits that would be or would continue to be exposed to traffic noise levels approaching or exceeding the Noise Abatement Criteria (NAC). A total of 15 noise barriers were evaluated under Build Alternative (Alternative 2) that consists of SR-91 WB mainline standard lane and shoulder widths and a total of 14 noise barriers were evaluated under Build Alternative (Alternative 2 with Design Option 1 – Reduced Lane/Shoulder Width).

Table 43 below summarizes the Alternative 2 barriers evaluated in the NSR. For a noise barrier to be considered feasible, the noise level reduction design goal of 5 dBA must be achieved at one or more of the benefited receptors. For the noise barrier to be considered

reasonable, the estimated construction cost must be below the total reasonable allowance of \$95,000 per benefited residence.

Table 43: Summary of Noise Barrier Evaluation (Build Alternative – Alternative 2)

Barrier	Location	Height (ft)	Acoustically Feasible?	Number of Benefited Residences	Reasonable Allowance per Residence	Total Reasonable Allowance

For both the Build Alternative (Alternative 2) and Preferred Alternative (Alternative 2 with Design Option 1 – Reduced Lane/Shoulder Width and Design Option 3: Pioneer Boulevard WB Ramps/168th St Alignment), estimated construction costs of each of the soundwalls found to be feasible in the NSR exceeded the reasonable allowance, except for two soundwalls. Soundwall No. 6.1, which is located along a new apartment development on the south side of the freeway in the City of Cerritos (along EB SR-91) was found to be both feasible and reasonable. This new 355 foot-long soundwall would be placed along the Caltrans Right of Way line in the eastbound direction abutting the Aria and Sage Apartment communities in the City of Cerritos and will be 14' in height.

The second new soundwall (Soundwall 2.2b) is a new 1,330 foot-long soundwall on the north side of the SR-91 WB to I-605 Connector and will extend across the SR-91W/I-605N&S Connector (Bridge No. 53-1707F) over Studebaker Road and will have 11 benefitted receptors in the City of Cerritos. This soundwall will be 14' or 16' in height.

Existing soundwalls impacted by the freeway widening will be removed and reconstructed at the new edge of shoulder location with the same top of wall elevation as the existing soundwall.

7. OTHER CONSIDERATIONS

Public Hearing Process

Public hearing meetings were conducted on August 1, 2018 and August 2, 2018 in the Cities of Cerritos and Artesia, respectively. The Draft IS/EA was circulated for public review for a period of 30 days, from July 18, 2018, to August 16, 2018. Forty-two (42) comment letters on the Draft IS/EA were received during the public review period and 5 comments were submitted after the public review period for a total of 47 comment letters.

Route Matters

Some modifications of ramp termini locations may warrant an amendment to the existing freeway agreement. The ramp geometry improvements proposed at Pioneer Boulevard, Norwalk Boulevard and Bloomfield Avenue interchanges is considered a modification to existing freeway access. The existing freeway agreement may require revision or replacement.

Permits

The proposed project is anticipated to require the permits, licenses, agreements, and certifications (PLACs) listed in Table 45 below.

Table 45: Project Permits and Approvals

Agency	PLAC	Status
Federal Highway Administration (FHWA)	Air Quality Conformity Approval Letter	The Air Quality Conformity report will be submitted to the FHWA after receipt of public comments on the IS/EA. The FHWA will make a conformity determination prior to final approval of the IS/EA.
California Department of Fish and Wildlife (CDFW)	Fish and Game Code Section 1602 Streambed Alteration Agreement	This application will be submitted after Environmental Document approval. Caltrans will coordinate with the CDFW to obtain an agreement regarding riparian habitat impacts and mitigation.
United States Army Corps of Engineers (USACE)	Federal Clean Water Act (CWA) Section 404 Permit	After approval of the Final Environmental Document, Caltrans will submit the Jurisdictional Delineation to the USACE. Caltrans will obtain the Preliminary Jurisdictional Determination from USACE during the PS&E phase. In addition, prior to obtaining grading permits, Caltrans will submit a

		Pre-Construction Notification form to the USACE to obtain coverage under NWPs 14 and 33, pursuant to Section 404 of the Federal CWA.
Regional Water Quality Control Board (RWQCB)	CWA Section 401 Water Quality Certification or waiver	Caltrans will submit the application to the RWQCB after approval of the Final Environmental Document. Caltrans will coordinate with the RWQCB to obtain water quality certification during final design. The RWQCB will provide comments on the application. Meetings between Caltrans and the RWQCB will be held if necessary during final design. Caltrans will obtain the certification or waiver from the RWQCB during final design and will implement the requirements included in the certification or waiver.
State Water Resources Control Board (SWRCB)	NPDES Construction General-Permit Order No. 2009-0009-DWQ, (as amended by 2012-0006-DWQ)	The permits, including the NOI, will be submitted to the SWRCB prior to any project construction.
State Water Resources Control Board (SWRCB)	Caltrans NPDES Permit Order No. 2012-0011-DWQ, (as amended by Order WQ 2014-0006-EXEC, Order WQ 2014-0077-DWQ, and Order WQ 2015-0036-EXEC, NPDES No. CAS000003)	The Permit Registration Documents, including the NOI, will be submitted to the SWRCB prior to any project construction.
California Department of Transportation (Caltrans)	Construction Encroachment Permit	Application for a Caltrans construction encroachment permit will be submitted prior to construction, if a contractor is procured by Metro.
City of Cerritos	Construction Encroachment Permit	Application for a City of Cerritos construction encroachment permit for temporary access onto public rights-of-way will be submitted prior to construction.
City of Artesia	Construction Encroachment Permit	Application for a City of Artesia construction encroachment permit for temporary access onto public rights-of-way will be submitted prior to construction.

IS/EA = Initial Study/Environmental Assessment

Metro = Los Angeles County Metropolitan Transportation Authority

NOI = Notice of Intent

NPDES = National Pollutant Discharge Elimination System

NWP = Nationwide Permit

PLAC = permits, licenses, agreements, and certifications

PS&E = Plans, Specifications, and Estimates

Cooperative Agreements

Caltrans will own and maintain the bridge structures, roadway pavement, and other related infrastructure. This is consistent with the existing Cooperative Agreement. Separate cooperative agreements will be required for the right-of-way, PS&E, and construction phases of the proposed project.

Report on Feasibility of Providing Access to Navigable Rivers

There are no traditional navigable waterways as defined by the Army Corps of Engineers found within the proposed project limits.

Public Boat Ramps

There are no public boat ramps within the proposed project limits.

Transportation Management Plan for Use During Construction

A Transportation Management Plan (TMP) is required for the proposed project. A Major TMP classification is anticipated for the proposed project. The objective of a TMP is to minimize disruption of existing traffic during construction, reduce potential construction related traffic conflicts and delays and maximize safety for the users of the transportation network (including motorists, bicyclists, pedestrians, and those with disabilities) during construction without compromising the quality of work being performed. Overnight short-term closures will be required to facilitate placement of roadway overhead signs, placement of K-rail, bridge falsework erection and removal, bridge pre-cast girder placement, and restriping of freeway and ramps for stage construction. Short-term closures of less than 10 days will also be required for ramp construction tie-ins to the widened freeway and 55-hour weekend lane closures will be required for certain construction activities as described in the sub-section "Stage Construction" below.

The following elements are expected to be recommended or discussed in the project TMP:

- Public Information
- Motorist Information
- Incident Management
- Construction

A TMP data sheet is included in Attachment D that estimates the associated cost for these strategies.

Stage Construction

Staging of construction would be required for all work on the proposed project. In addition to the TMP elements, all work areas will be protected by temporary safety devices, such as Temporary Railing (Type K), Temporary Crash Cushions, and other safety features in accordance with Federal, State, and Local Agency requirements.

Two overcrossing bridges will be replaced with this project due to the widening of the freeway and conflicts with existing column and abutment locations. The Bloomfield Avenue Overcrossing and the Gridley Road Overcrossing will be replaced, both within the City of Cerritos. The Gridley Road Overcrossing bridge replacement will occur as a single stage construction and will be closed to traffic during construction. Due to the width of the structure, the Bloomfield Avenue Overcrossing will be constructed using a 2-stage construction. Half of the structure will be constructed while the other half will accommodate existing traffic.

Construction of the project is scheduled to begin in 2022. Implemented in two stages with three sub-stages in the first construction stage, and two sub-stages in the second construction stage, the construction duration is estimated to be 24 months. Table 46 shows a brief description of the stages and estimated durations.

Table 46: Stage Construction Summary

Stage	Construction Activities	Traffic Handling	Duration
1A	<ul style="list-style-type: none"> Construct widening WB SR-91 using rapid set concrete Reconstruct EB SR-91 right shoulder using rapid set concrete 	<ul style="list-style-type: none"> 55-hr weekend closure. Storm Water Data Report

A PA/ED level Storm Water Data Report (SWDR) has been prepared for this proposed project per the guidelines given in the Caltrans Project Planning and Design Guide (PPDG). The total new impervious area due to the proposed project is 20.72 acres. The proposed treatment area is 20.65 acres. The permanent treatment BMP strategy will be determined at a later stage of design when more technical information is available; however, biofiltration strips/swales and media filters will be considered at this phase. The final selection of permanent BMPs will be determined during PS&E.

Temporary construction storm water pollution controls will be installed as early in the construction process as possible to provide additional protection and for utilization in addressing construction storm water impacts. The following are the minimum temporary construction site BMPs that have been designated:

- Hydraulic Mulch
- Temporary Soil Binders
- Temporary Cover
- Temporary check dams
- Storm Drain Inlet Protection
- Temporary Fiber Rolls
- Gravel Bag Berm
- Stabilized Construction Entrance/Exit

The cover page of the SWDR is included in Attachment E of this PR. The SWDR shall be updated during the final PS&E design stage.

Accommodation of Oversize Loads

SR-91 is not on the Department of Defense Rural and Single Interstate Routing System that would meet the most urgent national defense needs. FHWA has made a commitment to the Department of Defense to maintain 16.07 ft (4.9 m) minimum vertical clearance on the Priority Network. The SR-91 is also not the main route for vehicles coming to and from airports, harbors and testing sites. Special accommodations of oversize loads are not a requirement for the proposed project as this section of SR-91 is on the National Network for STAA, Lifeline Route and Scenic Highway System and is not identified as routes on the Interregional Road System and State Highway Extra Legal Load (SHELL) network.

Graffiti Control

According to the PDPM, the proposed project location is within a graffiti-prone area. Anti-graffiti design details will be evaluated as part of aesthetic treatments to project features during the PS&E phase. Vine planting will be proposed along sound wall locations wherever feasible.

Geotechnical and Geological

A Preliminary Geotechnical Design Report (PGDR) and Preliminary Structures Foundation Report (PSFR) have been prepared during the PA/ED phase to develop preliminary recommendations for the foundation requirements.

Available regional geologic maps show the upper 60 feet of the underlying soils generally consist of fine to medium grained, loose to medium dense, silty and clayey sand, sandy silt, poorly graded sand, and clayey silt. Interbeds of soft silt and clay and occasionally organic materials were also observed in these borings. Below 60 feet, the soils become generally fine to coarse, dense silty sand with varying amounts of gravel. Per Geotracker (2017), the groundwater elevation is generally in the range of about 49 to 53 feet above mean sea level (MSL) in the project area, corresponding to depths of approximately 7 to 12 feet and 20 feet below the existing ground surface in the vicinity of SR-91 alignment and I-605/Alondra Boulevard, respectively.

Based on the available information from the as-built Log-of-Test-Borings (LOTBs), preliminary estimates of the free-field liquefaction settlement ranges are between about 4 and 8 inches. Remedial grading beneath the wall foundations will be required to minimize the effects of settlement, if shallow foundations are considered. In this case, Caltrans standard wall Types 1 and 5 can be considered for the retaining walls. Remedial grading consisting of over-excavation and recompaction of loose materials should be performed to reduce the settlement potential. Also, previous exploration noted thin layers of soft silt and clay (occasionally organic) with estimated settlements of approximately ½ foot due to approach fill loads. As a preliminary recommendation, surcharge loading in combination with wick drains can be utilized at these locations to reduce the settlement potential. If the associated delay cannot be accommodated in the project schedule, lightweight fills can be used.

Drilling nine borings and advancing nine cone penetration test (CPT) soundings to depths of between 75 to 100 feet below ground surface or to refusal, whichever is less, during PS&E phase is recommended. The recommendations will be updated during final design based on the field investigation.

The project alignment is not located within an Alquist-Priolo Earthquake Fault Zone. According to the fault activity map of California (Jennings and Bryant, 2010), the closest significant active fault zone with Holocene surface rupture is Newport-Inglewood-Rose Canyon, crossing approximately 6.3 miles (10.1 kilometers) southwest of the I-605/SR-91 interchange.

Materials Report

A Preliminary Geotechnical Materials Report (PGMR) has been prepared during the PA/ED phase to develop preliminary recommendations for the pavement structural section requirements. Earthwork and paving included within the scope of work for this PGMR conform to the Caltrans Standard Specifications (Caltrans, 2015a). Using an R-value of 20, subgrade Type II is recommended in selecting rigid pavement sections. In fill areas, import borrow might be used to create the pavement subgrade. If import borrow

possessing an R-value greater than 40 and a Plasticity Index (PI) less than 12 percent is placed in the upper four feet of the grading plane (to establish subgrade), then thinner pavement sections (corresponding to an R-value of 41) may be used. The use of select import borrow will be evaluated in detail during the PS&E phase of the project. A Final Materials Report will be prepared during the PS&E phase for review and approval.

Life Cycle Cost Analysis

A Life-cycle Cost Analyses (LCCA) was conducted to determine the long-term cost effectiveness of various pavement designs. LCCA generates the total lifetime cost of the pavement converted to its present value, including initial construction costs, as well as future maintenance and user delay costs. The alternative with the lowest life-cycle cost is viewed as the most cost-effective pavement type even if it has a higher initial cost.

The project was divided into three pavement uses, westbound SR-91 mainline, I-605 mainline, and SR-91/I-605 ramps. A pavement life cycle analysis over 55 years was performed for each of these three pavement areas. A 40-year design life was used in the analysis. The Life Cycle Analysis followed the Caltrans Life-Cycle Cost Analysis Procedures Manual, updated August 2013, and utilizes the RealCost (Ver 2.5.3CA) software. Table 47 summarizes the Traffic Indices (TI) used in the LCCA. Table 48 summarizes the life-cycle cost analysis final recommendation that was approved by Caltrans District 7 Materials Division.

Table 47: Traffic Index

Location	Lane	20-Year Design Life	40-Year Design Life
SR-91 Mainline	Outside Lane	16.0	17.5
	Median Lane	13.5	15.0
I-605 Mainline	Outside Lane	15.5	16.5
	Median Lane	13.0	14.0
Ramps/Connectors	--	13.0	14.0

Table 48: Summary of Life-Cycle Cost Analysis Recommendation

Location	Recommended 40-year Pavement Thickness	Pavement Section
WB SR-91 Mainline Outside lanes (new construction)	JPCP (40 Year)	1.15' JPCP / BB / 0.35' LCB / 0.70' CL-3 AB
NB I-605 Mainline Outside lanes (new construction)	JPCP (40 Year)	1.10' JPCP / BB / 0.35' LCB / 0.70' CL-3 AB
Freeway Ramps and Interchange Connectors	JPCP (40 Year)	0.95' JPCP / BB / 0.35' LCB / 0.70' CL-3 AB
Local Roads	HMA	0.55' HMA-A / 0.55' LCB / 1.05' CL-3 AB

The existing pavement type on the westbound SR-91 mainline is Jointed Plain Concrete Pavement (JPCP). For constructability reasons and maintenance reasons, the additional widening of the freeway pavement is proposed to be JPCP. Continuously Reinforced Concrete Pavement (CRCP) showed similar life cycle costs than JPCP, but JPCP was selected by Caltrans Materials division as the approved pavement type based upon constructability, consistency with existing pavement, and maintenance reasons.

8. FUNDING, PROGRAMMING AND ESTIMATE

Funding

Funding for the proposed project is from County of Los Angeles Measure R sales tax funds, which are administrated by Metro. However, LA Metro may pursue other sources of state and federal funds for future phases of the project.

Under Measure R, \$590 million has been set aside for the I-605 “Hot Spots” Program. The project cost is estimated at \$121 Million and will be listed as an Early Action priority. Metro has been awarded \$32 million in 2018 Trade Corridor Enhancement Program (TCEP) funds by the California Transportation Commission (CTC) for design and R/W Capital.

Programming

Proposal Programming Data

The proposed project is listed in Amendment #3 to the 2016 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) with Project ID 1163S012. The 2016 RTP was approved by the Regional Council of the Southern California Association of Governments (SCAG) on April 7, 2016, and Amendment #3 was adopted in December 2018. The proposed project is programmed in the 2019 Federal Transportation Improvement Program (FTIP) with Project ID LA0G1119. The 2019 FTIP was approved by the SCAG on September 6, 2018.

Combined Projects

LA Metro and Caltrans are working on adding an auxiliary lane to Southbound I-605 between SR-91 and the South Street exit in the City of Cerritos. However, the I-605/South Street project is not related to the purpose and need of this project, nor do the project

limits touch or overlap. It would likely not be beneficial or cost effective to combine the two projects for the purposes of design or construction.

Multiple Counties

The proposed project improvements are located within the County of Los Angeles.

Table 49: Capital Outlay Support and Project Estimates

Funding Source	Fiscal Year Estimate						
	Prior	2018/19	2019/20	2020/21	2021/22	Future	Total
Component	In thousands of dollars (\$1,000)						
PA&ED Support	\$6,500	\$1,500					\$8,000
PS&E Support			\$3,000	\$6,000	\$3,000		\$12,000
Right-of-Way Support			\$300	\$400	\$100		\$800
Construction Support					\$100	\$8,900	\$9,000
Right-of-Way			\$2,000	\$10,000	\$4,100		\$16,100
Construction					\$105,300		\$105,300
Total	\$6,500	\$1,500	\$5,300	\$16,400	\$112,600	\$8,900	\$151,200

Support Cost Ratio

The above capital outlay support and project estimates are based upon the selected alternative. The fiscal year estimates for capital outlay support are shown in Table 49. The support cost ratio is 20%.

Estimate

The total escalated capital outlay cost of Preferred Alternative (Alternative 2 with Design Option 1 and 3) with non-standard lane and shoulder widths is estimated to be \$121,400,000. The primary capital costs of the proposed project are attributable to roadway costs. The estimated cost for roadway improvements is \$85,300,000, the estimated cost for structures is \$20,000,000, and the estimated cost for right-of-way is \$16,100,000. A detailed cost estimate has been provided in Attachment B.

9. DELIVERY SCHEDULE

Table 50 lists the major project milestones for the proposed project.

Table 50: Project Milestones

Project Milestones		Milestone Date (Month/Day/Year)	Milestone Designation (Target/Actual)
PROGRAM PROJECT	M015	3/15/2016	Actual
BEGIN ENVIRONMENTAL	M020	6/20/2016	Actual

APPROVE CONTRACT	M500	11/2022	Target
CONTRACT ACCEPTANCE	M600	5/2025	Target
END PROJECT	M800	5/2027	Target

10. RISKS

Caltrans Project Delivery Directive PD-09 requires that risk management be applied to all capital outlay projects and major maintenance projects delivered by Caltrans. Per the risk management protocol, a level 3 risk level has been applied to the proposed project based upon the anticipated project cost. A risk register has been prepared and is included in Attachment M.

11. FHWA COORDINATION

The project is located along westbound State Route 91, with minor improvements on I-605 northbound near the Alondra Boulevard exit, which will not preclude or interfere with any future planned improvements on I-605. Therefore, this project does not require review and approval by the Federal Highway Administration (FHWA).

Date: 6/25/18

Attn: District Branch Chief
R/W Local Programs

Co. LA Rte. 91/605
Expense Authorization 07-29811

Subject: **RIGHT OF WAY DATA SHEET – LOCAL PUBLIC AGENCIES**

Project Description: I-605/SR-91 Interchange Project
Post Mile SR-91 PM 16.9-19.8 / I-605 PM 5.0-5.8
Alternative 2

Right of way necessary for the subject project will be the responsibility of Los Angeles County Metropolitan Transportation Authority.

The information in this data sheet was developed by **Overland, Pacific & Cutler, Inc. in collaboration with Michael Baker International, Inc.**

I. Right of Way Engineering

Will Right of Way Engineering be required for this project?

- No ☐
- Yes ☒ (If yes, submit a copy of the *Right of Way Engineering Surveys and Mapping Services checklist for Locally Funded Projects*. This checklist includes, but is not limited to, the following items.)
 - Hard copy (base map) ☒
 - Appraisal map ☒
 - Acquisition documents ☒
 - Property Transfer Documents ☒
 - R/W Record Map ☒
 - Record of Survey ☒

II. Engineering Surveys

1. Is any surveying or photogrammetric mapping required?
No ☐ Yes ☒ if yes, complete the following:

Photogrammetric mapping was completed during the PA&ED phase based on control established by Caltrans. In addition, the photogrammetric mapping has been through the ABC Caltrans process and milestones A, B and C is complete. Photogrammetric mapping and engineering surveying will be once again initiated during the PS&E phase.

2. Datum Requirements

Yes ☒ Project will adhere to the following criteria:

- Horizontal - datum policy is NAD 83, CA-HPGN, EPOCH 1991.35 and English system of units and measures.
- Vertical - datum policy is NAVD 88.
- Units – metric is not required.

3. Will land survey monument perpetuation be scoped into the project, if required?

Yes ☒

No ☐ Provide explanation on additional page.

III. Parcel Information (Land and Improvements)

Are there any property rights required within the proposed project limits?

No ☐

Yes ☒ (Complete the following.)

	Part Take	Full Take	Estimate \$
A. Number of Vacant Land Parcels	<u>0</u>	<u>0</u>	<u>\$0</u>
B. Number of Single Family Residential Units	<u>6</u>	<u>18</u>	<u>\$10,593,044</u>
C. Number of Multifamily Residential Units	<u>2</u>	<u>0</u>	<u>\$354,827</u>
D. Number of Commercial/Industrial Parcels	<u>0</u>	<u>2</u>	<u>\$5,416,852</u>
E. Number of Farm/Agricultural Parcels	<u>0</u>	<u>0</u>	<u>\$0</u>
F. Permanent and/or Temporary Easements	<u>19</u>	<u>0</u>	<u>\$1,218,593</u>
G. Other Parcels (define in "Remarks" section)	<u>2</u>	<u>0</u>	<u>\$775,625</u>
H. Temporary Damages (no acquisition)**	<u></u>	<u></u>	<u>\$0</u>
Totals*	<u>29</u>	<u>20</u>	<u>\$18,358,940</u>

* Costs include 20% contingency & escalated for 3 years at 5% per year.

** Costs for parcels without acquisition that are temporarily damaged due to the temporary loss of use of their garages.

Provide a general description of the right of way and excess lands required (zoning, use, improvements, critical, or sensitive parcels, etc.).

For this project, right of way required for acquisition includes approximately 89,290 square feet of Temporary Construction Easement (TCE), 640 square feet of Permanent Easement and 109,388 square feet of Fee Acquisition. The impacted properties generally consist of Commercial, Industrial, Residential, School, Park, and city owned property types, impacting approximately 49 parcels.

APN 7014-004-032 (16905 Pioneer Blvd / Denny's Restaurant and Quality Inn & Suites) - The proposed driveway modification impacts the entire driveway during construction. Assumed driveway can be constructed in two phases (ie. half at a time) and maintain access during construction. Assumed potential damages to the business due to temporary loss of use of a portion of the driveway during construction. Assumed monument sign is protected in place.

APN 7014-004-005 (16809 Pioneer Blvd / Arco Gas Station) - Environmental remediation is not included within this estimate due to the very preliminary design layout and unknown hazardous waste / improvements to remediate. There is high potential for severe impacts to both project right of way delivery schedules and cost estimates.

APN 7011-021-066 (12027 170th St) – drainage in front of parcel. Assumed drainage will be protected in place or reconfigured to avoid drainage issues.

APN 7012-001-901 (12222 Cuesta Dr / Tracy High School and ABC Adult School) - Due to the proposed road improvements along Norwalk Boulevard, the partial acquisition eliminates approximately 26 parking stalls and the TCE impacts the entire parking area along Norwalk Boulevard which appears is mainly utilized by Tracy High School. Assumed project to pay for restriping/reconfiguration of the parking area to recoup all of the lost parking stalls and provide sufficient fire access/traffic circulation, this work to take place prior to project start date to avoid parking/fire access issues and return the lost stalls prior to school session. Assumed the proposed parking reconfiguration to take place during summer, weekends or evening when parking is in less demand, returning the use of parking quickly to minimize damage. Careful planning with regards to construction and the school session schedule should be considered to avoid increased costs, delays in the schedule and potential negative public perception. Further analysis required.

IV. Dedications

Are there any property rights which have been acquired, or anticipate will be acquired, through the “dedication” process for the Project?

No ☒ Yes ☐ (Complete the following.)

Number of dedicated parcels 0

Have the dedication parcel(s) been accepted by the municipality involved?

There are no dedications anticipated by surrounding developers / property owners.

V. Excess Lands/Relinquishments

Are there Caltrans property rights which may become excess lands or potential relinquishment areas?

No ☐ Yes ☒ (Provide an explanation on additional page.)

There may be potential relinquishments resulting from the closure of the westbound onramps near Pioneer Boulevard and Norwalk Boulevard.

VI. Relocation Information

Are relocation displacements anticipated?

No ☐ Yes ☒ (Complete the Following.)

A. Number of Single Family Residential Units		
Estimated RAP Payments	<u>18</u>	<u>\$3,104,750</u>
B. Number of Multifamily Residential Units		
Estimated RAP Payments	<u>0</u>	<u>\$0</u>
C. Number of Business/Nonprofit	<u>3</u>	<u>\$246,574</u>

Estimated RAP Payments		
D. Number of Farms		
Estimated RAP Payments	0	\$0
E. Other (define in the "Remarks" section)		
Estimated RAP Payments	0	\$0
Total*	21	\$3,351,324

* Costs include 20% contingency & escalated for 3 years at 5% per year.

VII. Utility Relocation Information

Do you anticipate any utility facilities or utility rights of way to be affected?

No ☐ Yes ☒ (Complete the following.)

			Estimated Relocation Expense		
			State Obligation*	Local Obligation	Utility Owner Obligation
Facility		Owner			
A	Power pole	SCE		\$50,000	
B	Power pole	SCE		\$50,000	
C	Underground Telecommunications	GenTel		\$32,000	
D	Power pole	SCE		\$50,000	
E	2” Underground Gas	SCG		\$26,220	
F	2” Underground Water	County Water Company		\$24,660	
G	Overhead Electrical for Street Lighting	SCE		\$10,000	
H	12kV Overhead Electrical & Power pole	SCE		\$106,400	
I	Underground Telecom	Time Warner		\$9,200	
J	Underground Electrical for Street Lighting	SCE		\$20,000	
K	12kV Underground Electrical	SCE		\$130,000	
L	Underground Telecom	Wilshire Connection LLC		\$142,600	
M	Underground Telecom	Frontier		\$142,600	
N	Underground Telecom	Time Warner		\$142,600	
O	Fire Hydrant	City of Cerritos		\$30,000	
P	8” Underground Gas	SoCal Gas		\$35,000	
Q	3” Underground Gas	Texas Oil		\$30,000	
R	10” Underground Gas	POW		\$33,000	
S	Power Pole	SCE		\$50,000	
T	Overhead Electrical for Street Lighting	SCE		\$3,230	
U	Power Pole for Telecommunications	Time Warner		\$50,000	
V	Power Pole for Telecommunications	Time Warner		\$10,000	
W	Overhead Telecommunications	Time Warner		\$3,800	
X	2" Underground Gas	SCG		\$4,750	

	Total (including contingency)			\$1,482,575	
	TOTALS**			\$1,660,484	
	Number of Facilities			24	

*This amount reflects the estimated total financial obligation by the State.

** Utility costs include 25% contingency & an escalation rate of 12%.

Any additional information concerning utility involvement on this project?

Refer to the utility information sheet for additional information.

VIII. Rail Information

Are railroad facilities or railroad rights of way affected?

No ☒ Yes ☐ (Complete the following.)

Describe the railroad facilities to be affected.

Owner's Name	Transverse Crossing	Longitudinal Encroachment
A.		
B.		
C.		
D.		

Discuss types of agreements and rights required from railroads. Are grade crossings that require services contracts, or grade separations that require construction and maintenance agreements involved?

IX. Clearance Information

Are there improvements that require clearance?

No ☐ Yes ☒ (Complete the following.)

A.	Number of structures to be Demolished	20
	Estimated Cost of Demolition	\$1,080,759*

* Costs include 20% contingency & escalated for 3 years at 5% per year.

X. Hazardous Materials/Waste

Are there any site(s) and/or improvements(s) in the Project Limits that are known to contain

hazardous materials? None ☒ Yes ☐ (Explain in the "Remarks" section.)

Are there any site(s) and or improvement(s) in the Project Limits that are suspected to contain

hazardous waste? None ☐ Yes ☒ (Explain in the "Remarks" section.)

XI. Project Scheduling

	Proposed lead time		Completion Date
* Preliminary Engineering Surveys	31	months	1/2019
* R/W Engineering Submittals	24	months	7/2019
* R/W Appraisals/Acquisition	12	months	1/2021
Proposed Environmental Clearance			1/2019
Proposed R/W Certification			4/2021

XII. Proposed Funding

	Local	State	Federal	Other
Acquisition	\$18,358,940			
Utilities	\$1,660,484**			
Relocation Assistance Program	\$3,351,324			
Loss of Business Goodwill	\$1,444,716			
Structures Testing + Demolition	\$1,080,759			
Condemnation	\$484,715			
R/W Support Cost	\$1,974,260*			
TOTAL	\$28,355,198			
COMBINED TOTAL	\$28,355,198			

The proposed funding allocation above is conceptual based upon preliminary discussions with the project team. Acquisition and R/W support cost include 20% contingency & escalated for 3 years at 5% per year (except the utility costs).

* The R/W Support Costs will change based on who will perform these services and the costs for these services.

** Utility costs include 25% contingency & an escalation rate of 12%.

XIII. Remarks

Refer to Section III - Parcel Information (Land and Improvements) for sensitive parcels and additional information. The "other" parcels listed refers to a City owned park and a High School/Adult School.

Regarding Section X - Hazardous Materials/Waste, refer to the attached Phase I ISA report for additional information.

Nine potential hazardous materials sites within the Project Corridor, that are located in areas of proposed construction, were identified during the regulatory database search and site reconnaissance. A Phase 2 Site Investigation including soil sampling should be conducted during the PS&E (design) phase of the project development.

Based on the time period of construction of SR-91 and I-605, the Project Corridor has been present for several decades and subsequent soil sampling has confirmed that exposed soil in the immediate vicinity project is contaminated with ADL. Testing of ADL contamination should be conducted along the project limits as part of the Phase 2 Site Investigation during the PS&E phase of the project development, once the highway geometrics and construction limits are known definitively.

Thermoplastic paints on the freeways are likely to contain lead. Various residential and commercial buildings were constructed along the Project Corridor prior to the discontinued use of LBP. Should any structures be disturbed as part of the proposed project, sampling for LBP is recommended.

Based on the historical use of many areas within or in the vicinity of the Project Corridor as agricultural land, soils within the project limits may be impacted by pesticides. While limited soil excavation is planned, where un-paved areas will experience soil disturbance, investigation of the soil for pesticides is recommended.

RIGHT OF WAY DATA SHEET FOR LOCAL PUBLIC AGENCIES

(Form #)

There is a potential APN 7014-004-005 (16809 Pioneer Blvd / Arco Gas Station) may have hazardous waste / improvements to remediate. Further analysis required.

Description of Project:

The Los Angeles County Metropolitan Transportation Authority (Metro) and the California Department of Transportation (Caltrans) propose to improve the Westbound State Route 91 (SR-91). The principal improvements consist of adding one additional lane on the WB SR-91 between Shoemaker Ave and the I-605/SR-91 Interchange, one additional lane on the WB SR-91 to NB I-605 connectors, and modernizes the on and off ramps throughout the project limits.

Estimate for: ☐ Preliminary Route Estimate (Alternate No. _____)
☒ R/W Data Sheet (Preferred Alternate)

Evidence of Utilities:

☒ Gas ☒ Electric ☒ Telephone ☒ Cable TV ☒ Water ☐ Public Drainage/Irrigation
☒ Sewer ☐ Fiber Optics ☒ Other (Explain in "Remarks")

Anticipated Utility Relocations:

☒ Gas ☒ Electric ☒ Telephone ☒ Cable TV ☒ Water ☐ Public Drainage/Irrigation
☒ Sewer ☐ Fiber Optics ☐ Other (Explain in "Remarks")

Estimated Cost of Utility Relocations:

<u>0</u> L.F. of Gas Line	@ \$ <u>0</u> /L.F.	=	\$ <u>0</u>
<u>2,000</u> L.F. of UG Electric Line	@ \$ <u>100</u> /L.F.	=	\$ <u>200,000</u>
<u>4,120</u> L.F. of UG Telephone Line	@ \$ <u>115</u> /L.F.	=	\$ <u>473,800</u>
<u>2</u> Wood Poles (Telephone)	@ \$ <u>30,000*</u> /Pole	=	\$ <u>60,000</u>
<u>1</u> Wood Poles (Electric)	@ \$ <u>50,000</u> /Pole	=	\$ <u>50,000</u>
<u>5</u> Joint Poles	@ \$ <u>50,000</u> /Pole	=	\$ <u>250,000</u>

<u>0</u> L.F. of Sewer Line	@ \$ <u>1,667</u> /L.F.	=	\$ <u>0</u>
<u>0</u> L.F. of Fiber Optics Line	@ \$ <u>0</u> /L.F.	=	\$ <u>0</u>
<u>6,435</u> L.F. of Removals	@ \$ <u>19</u> /L.F.	=	\$ <u>122,260</u>

TOTAL ESTIMATE (State's Share) (25% Contingency) = \$ 1,482,575

Remarks:

"L.F. of Removals" include the removal of existing sewer, water, telecommunications, telephone, electrical, and associated maintenance access structures. Total Estimate includes a 25% contingency.

Cost includes the utility impacts of the Pioneer WB Ramps/168th Alignment Option (\$121,780).

The cost impacts to existing and proposed sewer lines are included in the Project Cost Estimate.

*The separate unit price for the 2 telephone wood poles is \$50,000 & \$10,000. The average price for both poles is \$30,000.

INSTRUCTIONS FOR PREPARING THE UTILITIES PORTION OF THE
RIGHT OF WAY DATA SHEET

(Fill in all blank spaces and explain where necessary.)

Item 1. Right of Way Cost Estimate: (Capital)

B. Utility Relocation (State Share)

Current Value (Future Use)	Escalation Rate	Escalated Value
<u>\$1,482,575</u>	<u>12%</u>	<u>\$1,660,484</u>

- 2a. Enter the total estimated dollar amount which the State will need to pay the affected utility owners for relocation of their facilities. Estimates can be obtained from the owners or the Utility Coordinator's best guess. The estimate must be as accurate as possible, but should always be based on the most probable "worst case" and "highest cost" assumptions.
- 2b. Enter the escalation rate as a percentage. The escalation rate is the expected yearly average increase in utility relocation costs to the year of utility construction completion. Escalation rates can be obtained from construction and building cost indices, past trends in utility relocation projects, etc.
- 2c. Enter the total dollar amount using 2a. escalated to the year of utility construction completion by 2b., i.e.:

\$100,000.00	(Current relocation costs--2a.)
<u>x 1.05</u>	(Escalation rate of 5%--2b.)
\$105,000.00	(Escalated Value--2c.)

Item 3. Parcel Data: (Support)

Utilities

- U4-1 24 = The total number of expected owner expense involvements.
- 2 _____ = The total number of expected State expense involvements; conventional highway (no access control) and no Federal aid for the project.
- 3 _____ = The total number of expected State expense involvements; freeway (access control) and no Federal aid for the project.
- 4 _____ = The total number of expected State expense involvements; conventional highway or freeway and Federal aid for the project.
- U5-7 _____ = The total number of expected utility verifications, which will not result in involvements.
- 8 _____ = The total number of expected utility verifications, anticipating 50% of the verifications will have involvements and 50% will not.
- 9 24 = The total number of expected utility verifications, which will result in involvements.

NOTE: The sum of the U4s must equal the sum of 1/2 of the U5-8s and all of the U5-9s.

Item 7. Are utility facilities or rights of way affected?

☒ Yes ☐ No (If “Yes,” explain.)

Studebaker Rd

SCE has an overhead 66kv electrical line that runs along Studebaker Rd and crosses both the WB 91/NB 605 Connector and WB 91 mainline. Currently there is a power pole approximately 18.5ft away from the connector and another power pole approximately 15.5ft away from the mainline. Due to the widening of both the connector and mainline, we believe these poles and the associated power lines will be impacted. Our resolution is to relocate the two power poles so that necessary clearance requirements are met.

169th St

A joint OH SCE 12kV power and Time Warner Telecom run adjacent to the freeway. Field investigations and measurements have determined that the power pole overhang (Pole #44200073E) will encroach into Caltrans R/W. The pole will need to be relocated further into the private property eliminate the conflict with the overhang.

Pioneer Blvd

Pioneer Blvd contains several utilities within the roadway. Existing gas, sewer, and water facilities will be protected in place or access adjusted to grade as needed. SCE 12kV, Frontier, Time Warner, and Wilcon telecom facilities are within the roadway and are not anticipated to be moved. The Pioneer WB Ramps/168th Alignment Option impacts several homes on 168th St. The power, sewer, and gas services to the residential homes along 168th St will be removed or relocated. Further coordination with these utility owners will need to take place to determine if the utility lines need to be moved into the sidewalk for maintenance purposes or be left in place. **The cost impacts to existing and proposed sewer lines are included in the Project Cost Estimate.**

170th St

The widening of the freeway will encroach upon 170th St and will require the homes along 170th St to be fully taken. There is an overhead electrical line that appears to be serving the existing street light poles. There is also a water line, gas line, and sewer line along 170th St and a portion of Elaine St (up to 169th St) that will need to be removed. **The cost impacts to existing and proposed sewer lines are included in the Project Cost Estimate.**

Norwalk Blvd

There is an overhead electrical line that crosses over the mainline. There is an existing pole approximately 20ft away and may be in conflict with the widening of the SR-91. We are proposing to underground the line under the bridge to eliminate future pole conflicts and clearance issues that may occur. The existing power pole south of the freeway will need additional reinforcement and will also be relocated to provide adequate clearance from the bridge. An existing overhead telecom line runs along Norwalk Blvd that runs underground as it crosses the mainline and will need to be extended to the new power pole location. Near the intersection of Norwalk Blvd and Cuesta Dr, there is an underground electrical line that powers the street lights that will need to be rerouted to accommodate the new location of the street lighting. A 33” underground sewer line crosses SR-91 diagonally from Morning Rain Ave to the back of ABC adult school’s parking lot adjacent to Judy Way. The manhole in the parking lot will be relocated outside of Caltrans R/W to eliminate any conflicts with the proposed improvements and will allow the City of Cerritos to maintain access to the line. The sewer line will need to be adjusted to connect to the new manhole location. **The cost impacts to existing and proposed sewer lines are included in the Project Cost Estimate.**

Bloomfield Ave

Currently, there are underground electricity and telecom lines that run through the Bloomfield Ave OC bridge. The proposed bridge will be a full bridge replacement from the existing bridge. This means that the existing electrical and telecom lines will need to be reestablished within the new bridge. A suspended bridge for temporary overhead lines will be constructed to allow service to be provided during the removal and construction of the Bloomfield Ave OC bridge. There is also a fire hydrant that will need to be relocated to remain operational for future use.

NOTE: The comments mentioned above must be reflected in the number of involvements in U4s and U5s in “Item 3., Parcel Data.”

- Item 14. Indicate the anticipated Right of Way schedule and lead time requirements. (Discuss if the District proposes less than formula lead time and/or if significant pressures for project advancement are anticipated.)

This section is used to discuss the total amount of months you need to complete your work (lead time).

A minimum of 6 months is required for all projects where verifications are needed. If relocations are involved, it is best to request at least 9 months; for tower or other complex relocations, 18 months are needed. (Utility owners can tell you long lead time materials.)

NOTE: It is always a good idea to remind the project engineer that lead time starts for relocation of utilities when they supply adequate plans for requesting relocation plans from utility owners.

- Item 15. Is it anticipated that all Right of Way work will be performed by CALTRANS staff?

☒ Yes ☐ No (If "No," discuss.)

*Evaluations prepared by:

Utilities: Name  Date 6/28/18
Joseph Carbajal, Project Engineer

*The Utility Coordinator must sign and date the R/W Data Sheet.

NOTE: Return the R/W Data Sheet to R/W P&M via the District Utility Coordinator for input into PMCS and forwarding to the project engineer.

Right of way necessary for the subject project will be the responsibility of Los Angeles County Metropolitan Transportation Authority.

The information in this data sheet was developed by **Overland, Pacific & Cutler, LLC in collaboration with Michael Baker International, Inc.**

I. Right of Way Engineering

Will Right of Way Engineering be required for this project?

- No ☐
- Yes ☒ (If yes, submit a copy of the *Right of Way Engineering Surveys and Mapping Services checklist for Locally Funded Projects*. This checklist includes, but is not limited to, the following items.)
 - Hard copy (base map) ☒
 - Appraisal map ☒
 - Acquisition documents ☒
 - Property Transfer Documents ☒
 - R/W Record Map ☒
 - Record of Survey ☒

II. Engineering Surveys

1. Is any surveying or photogrammetric mapping required?
No ☐ Yes ☒ if yes, complete the following:

Photogrammetric mapping was completed during the PA&ED phase based on control established by Caltrans. In addition, the photogrammetric mapping has been through the ABC Caltrans process. Milestones A, B and C are still currently under review. Photogrammetric mapping and engineering surveying will be once again initiated during the PS&E phase.

2. Datum Requirements

Yes ☒ Project will adhere to the following criteria:

- Horizontal - datum policy is NAD 83, CA HPGN, EPOCH 1991.35 and English system of units and measures.
- Vertical - datum policy is NAVD 88.
- Units – FeetUS.

3. Will land survey monument perpetuation be scoped into the project, if required?

Yes ☒

No ☐ Provide explanation on additional page.

III. Parcel Information (Land and Improvements)

Are there any property rights required within the proposed project limits?

No ☐

Yes ☒ (Complete the following.)

	Part Take	Full Take	Estimate \$
A. Number of Vacant Land Parcels	<u>2</u>	<u>2</u>	<u>\$1,290,000</u>
B. Number of Single Family Residential Units	<u>1</u>	<u>5</u>	<u>\$2,917,000</u>
C. Number of Multifamily Residential Units	<u>1</u>	<u>0</u>	<u>\$313,000</u>
D. Number of Commercial/Industrial Parcels	<u>1</u>	<u>0</u>	<u>\$106,000</u>
E. Number of Farm/Agricultural Parcels	<u>0</u>	<u>0</u>	<u>\$0</u>
F. Permanent and/or Temporary Easements	<u>9</u>	<u>0</u>	<u>\$614,000</u>
G. Other Parcels (define in "Remarks" section)	<u>4</u>	<u>0</u>	<u>\$587,000</u>
Totals*	<u>18</u>	<u>7</u>	<u>\$5,827,000</u>

* Costs include 20% contingency & escalated for 3 years at 5% per year.

Provide a general description of the right of way and excess lands required (zoning, use, improvements, critical, or sensitive parcels, etc.).

For this project, right of way required for acquisition includes approximately 26,000 square feet of Temporary Construction Easement (TCE), and approximately 50,000 square feet of Fee Acquisition. The impacted properties generally consist of Commercial, Residential, School, and city owned property types, impacting approximately 25 parcels.

APN 7011-005-902 (16712 1/2 Pioneer Blvd) - Driveway is within access control, assumed design exception is granted. Assumed access is maintained during construction and in the after condition. Parking may need to be re-striped/reconfigured to recoup some of the lost stalls. Assumed sufficient fire access during construction and in the after condition. Further analysis required.

7011-005-901, 7011-005-903 (11817 & 11825 168Th St) - Assumed shared driveway will be provided to access the parcel by the project or the city.

APN 7014-004-032 (16905 Pioneer Blvd / Denny's Restaurant and Quality Inn & Suites) - The proposed driveway modification impacts the entire driveway during construction. Assumed driveway can be constructed in two phases (i.e. half at a time) and access is maintained during construction. Assumed potential damages to the business due to temporary loss of use of a portion of the driveway during construction. Assumed monument sign is protected in place. Further analysis required.

APN 7012-001-901 (12222 Cuesta Dr. / Tracy High School and ABC Adult School) - Due to the proposed road improvements along Norwalk Boulevard, the partial acquisition eliminates approximately 26 parking stalls and the TCE impacts the entire row of parking stalls along Norwalk Boulevard. This parking lot is mainly utilized by Tracy High School. Assumed project to pay for restriping/reconfiguration of the parking area to recoup all of the lost parking stalls and provide sufficient fire access/traffic circulation, this work to take place prior to project start date to avoid parking/fire access issues and return the lost stalls prior to school session. Assumed the proposed parking reconfiguration to take place during summer, weekends or evening when parking is in less demand, returning the use of parking quickly to minimize damage. Careful planning with regards to construction and the school session schedule should be considered to avoid increased costs, delays in the schedule and potential negative public perception. Assumed monument sign at the corner of Norwalk Blvd. and Cuesta Dr. is protected in place. Further analysis required.

IV. Dedications

Are there any property rights which have been acquired, or anticipate will be acquired, through the “dedication” process for the Project?

No ☒ Yes ☐ (Complete the following.)

Number of dedicated parcels 0

Have the dedication parcel(s) been accepted by the municipality involved?

There are no dedications anticipated by surrounding developers / property owners.

V. Excess Lands/Relinquishments

Are there Caltrans property rights which may become excess lands or potential relinquishment areas?

No ☐ Yes ☒ (Provide an explanation on additional page.)

There may be potential relinquishments resulting from the closure of the westbound onramps near Pioneer Boulevard and Norwalk Boulevard.

VI. Relocation Information

Are relocation displacements anticipated?

No ☐ Yes ☒ (Complete the Following.)

A. Number of Single Family Residential Units		
Estimated RAP Payments	<u>5</u>	<u>\$886,000</u>
B. Number of Multifamily Residential Units		
Estimated RAP Payments	<u>0</u>	<u>\$0</u>
C. Number of Business/Nonprofit		
Estimated RAP Payments	<u>0</u>	<u>\$11,000**</u>
D. Number of Farms		
Estimated RAP Payments	<u>0</u>	<u>\$0</u>
E. Other (define in the “Remarks” section)		
Estimated RAP Payments	<u>0</u>	<u>\$0</u>
Total	<u>5*</u>	<u>\$897,000</u>

* Costs include 20% contingency & escalated for 3 years at 5% per year.

**The associated relocation cost is exclusively for the move of personal property located in the existing storage shed.

VII. Utility Relocation Information

Do you anticipate any utility facilities or utility rights of way to be affected?

No ☐ Yes ☒ (Complete the following.)

			Estimated Relocation Expense		
			State Obligation	Local Obligation	Utility Owner Obligation
Facility			Owner		
A	Power pole	SCE		\$50,000	
B	Power pole	SCE		\$50,000	
C	Underground Telecommunications	GenTel		\$32,000	
D	Underground Telecom	Time Warner		\$9,200	
E	Underground Electrical for Street Lighting	SCE		\$20,000	
F	12kV Underground Electrical	SCE		\$130,000	
G	Underground Telecom	Wilshire Connection LLC		\$142,600	
H	Underground Telecom	Frontier		\$142,600	
I	Underground Telecom	Time Warner		\$142,600	
J	Fire Hydrant	City of Cerritos		\$30,000	
K	8” Underground Gas	SoCal Gas		\$35,000	
L	3” Underground Gas	Texas Oil		\$30,000	
M	10” Underground Gas	POW		\$33,000	
N	Power Pole	SCE		\$50,000	
O	Underground Electrical for Street Lighting	SCE		\$3,230	
P	Power Pole for Telecommunications	Time Warner		\$50,000	
Q	Power Pole for Telecommunications	Time Warner		\$10,000	
R	Overhead Telecommunications	Time Warner		\$3,800	
S	2" Underground Gas	SCG		\$4,750	
	Total			\$968,780	
	Total (including contingency)			\$1,210,975	
	Totals *			\$1,356,292	
	Number of Facilities			19	

*This amount reflects the estimated total financial obligation by the State.

* Utility costs include 25% contingency & an escalation rate of 12%.

Any additional information concerning utility involvement on this project?

Refer to the utility information sheet for additional information.

VIII. Rail Information

Are railroad facilities or railroad rights of way affected?

No ☒ Yes ☐ (Complete the following.)

Describe the railroad facilities to be affected.

Owner's Name	Transverse Crossing	Longitudinal Encroachment
A.		
B.		
C.		
D.		

Discuss types of agreements and rights required from railroads. Are grade crossings that require services contracts, or grade separations that require construction and maintenance agreements involved?

IX. Clearance Information

Are there improvements that require clearance?

No ☐ Yes ☒ (Complete the following.)

A.	Number of structures to be Demolished	<u>5</u>
	Estimated Cost of Demolition	<u>\$112,000*</u>

* Costs include 20% contingency & escalated for 3 years at 5% per year.

Demolition of structures within proposed right of way is not anticipated as part of this project.

X. Hazardous Materials/Waste

Are there any site(s) and/or improvements(s) in the Project Limits that are known to contain

hazardous materials? None ☒ Yes ☐ (Explain in the "Remarks" section.)

Are there any site(s) and or improvement(s) in the Project Limits that are suspected to contain

hazardous waste? None ☐ Yes ☒ (Explain in the "Remarks" section.)

XI. Project Scheduling

	Proposed lead time		Completion Date
* Preliminary Engineering Surveys	<u>31</u>	months	<u>1/2019</u>
* R/W Engineering Submittals	<u>24</u>	months	<u>7/2019</u>
* R/W Appraisals/Acquisition	<u>12</u>	months	<u>1/2021</u>
Proposed Environmental Clearance			<u>1/2019</u>
Proposed R/W Certification			<u>4/2021</u>

XII. Proposed Funding

	Local	State	Federal	Other
Acquisition	\$5,827,000			
Utilities	\$1,356,292			
Relocation Assistance Program	\$897,000			
Loss of Business Goodwill	\$7,641,000			
Structures Testing + Demolition	\$112,000			
Condemnation	\$290,000			
R/W Support Cost	\$837,000			
TOTAL	\$16,960,292			
COMBINED TOTAL	\$16,960,292			

The proposed funding allocation above is conceptual based upon preliminary discussions with the project team. Acquisition and R/W support cost include 20% contingency & escalated for 3 years at 5% per year (except the utility costs).

* The R/W Support Costs will change based on who will perform these services and the costs for these services.

** Utility costs include 25% contingency & an escalation rate of 12%.

XIII. Remarks

Refer to Section III - Parcel Information (Land and Improvements) for sensitive parcels and additional information. The "other" parcels in the table in section III refers to the following:

- 7012-001-901 High School/Adult School
- 7014-003-027 Restaurant – This property is not directly impacted by any acquisition, however changes to the median in the street may cause loss of business at this property. Business goodwill has been estimated for this property.
- 7011-001-018 Gas Station – This property is not directly impacted by any acquisition, however changes to the median in the street may cause loss of business at this property. Business goodwill has been estimated for this property.
- 7011-001-004 Hardware Store - This property is not directly impacted by any acquisition, however changes to the median in the street may cause loss of business at this property. Business goodwill has been estimated for this property.

Regarding Section X - Hazardous Materials/Waste, refer to the attached Phase I ISA report for additional information.

Nine potential hazardous materials sites within the Project Corridor, that are located in areas of proposed construction, were identified during the regulatory database search and site reconnaissance. A Phase 2 Site Investigation including soil sampling should be conducted during the PS&E (design) phase of the project development.

Based on the time period of construction of SR-91 and I-605, the Project Corridor has been present for several decades and subsequent soil sampling has confirmed that exposed soil in the immediate vicinity project is contaminated with ADL. Testing of ADL contamination should be conducted along the project limits as part of the Phase 2 Site Investigation during the PS&E phase of the project development, once the highway geometrics and construction limits are known definitively.

Thermoplastic paints on the freeways are likely to contain lead. Various residential and commercial buildings were constructed along the Project Corridor prior to the discontinued use of LBP. Should any structures be disturbed as part of the proposed project, sampling for LBP is recommended.

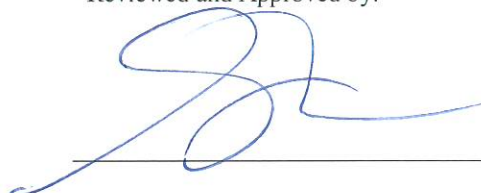

Based on the historical use of many areas within or in the vicinity of the Project Corridor as agricultural land, soils within the project limits may be impacted by pesticides. While limited soil excavation is planned, where un-paved areas will experience soil disturbance, investigation of the soil for pesticides is recommended.

Description of Project:

The Los Angeles County Metropolitan Transportation Authority (Metro) and the California Department of Transportation (Caltrans) propose to improve the Westbound State Route 91 (SR-91). The principal improvements consist of adding one additional lane on the WB SR-91 between Shoemaker Ave and the I-605/SR-91 Interchange, one additional lane on the WB SR-91 to NB I-605 connectors, and modernizes the on and off ramps throughout the project limits.

☒ Sewer ☐ Fiber Optics ☐ Other (Explain in "Remarks")

Estimated Cost of Utility Relocations:

<u>0</u> L.F. of Gas Line	@ \$ <u>0</u> /L.F.	=	\$ <u>0</u>
<u>1,920</u> L.F. of UG Electric Line	@ \$ <u>100</u> /L.F.	=	\$ <u>192,000</u>
<u>2,996</u> L.F. of UG Telephone Line	@ \$ <u>115</u> /L.F.	=	\$ <u>344,535</u>
<u>1</u> Wood Poles (Telephone)	@ \$ <u>60,000</u> /Pole	=	\$ <u>60,000</u>
<u>1</u> Wood Poles (Electric)	@ \$ <u>50,000</u> /Pole	=	\$ <u>50,000</u>
<u>4</u> Joint Poles	@ \$ <u>50,000</u> /Pole	=	\$ <u>200,000</u>
<u>0</u> Steel Poles	@ \$ <u>0</u> /Pole	=	\$ <u>0</u>
<u>0</u> Steel Towers	@ \$ <u>0</u> /Tower	=	\$ <u>0</u>
<u>0</u> L.F. of Water Line	@ \$ <u>0</u> /L.F.	=	\$ <u>0</u>
<u>1</u> Fire Hydrants	@ \$ <u>30,000</u> /F.H.	=	\$ <u>30,000</u>
<u>0</u> L.F. of Sewer Line	@ \$ <u>1,667</u> /L.F.	=	\$ <u>0</u>
<u>0</u> L.F. of Fiber Optics Line	@ \$ <u>0</u> /L.F.	=	\$ <u>0</u>
<u>4,855</u> L.F. of Removals	@ \$ <u>19</u> /L.F.	=	\$ <u>92,245</u>

TOTAL ESTIMATE (State's Share) (25% Contingency) = \$ 1,210,975

Remarks:

"L.F. of Removals" include the removal of existing water, telecommunications, telephone, electrical, and associated maintenance access structures. Total Estimate includes a 25% contingency.

Cost includes the utility impacts of the Pioneer WB Ramps/168th Alignment Option (\$121,780).

The cost impacts to existing and proposed sewer lines are included in the Project Cost Estimate.

Utility impacts are for the Non-Standard Option.

INSTRUCTIONS FOR PREPARING THE UTILITIES PORTION OF THE
RIGHT OF WAY DATA SHEET

(Fill in all blank spaces and explain where necessary.)

Item 1. Right of Way Cost Estimate: (Capital)

B. Utility Relocation (State Share)

Current Value (Future Use)	Escalation Rate	Escalated Value
<u>\$1,210,975</u>	<u>12%</u>	<u>\$1,356,292</u>

- 2a. Enter the total estimated dollar amount which the State will need to pay the affected utility owners for relocation of their facilities. Estimates can be obtained from the owners or the Utility Coordinator's best guess. The estimate must be as accurate as possible, but should always be based on the most probable "worst case" and "highest cost" assumptions.
- 2b. Enter the escalation rate as a percentage. The escalation rate is the expected yearly average increase in utility relocation costs to the year of utility construction completion. Escalation rates can be obtained from construction and building cost indices, past trends in utility relocation projects, etc.
- 2c. Enter the total dollar amount using 2a. escalated to the year of utility construction completion by 2b., i.e.:

\$100,000.00	(Current relocation costs--2a.)
<u>x 1.05</u>	(Escalation rate of 5%--2b.)
\$105,000.00	(Escalated Value--2c.)

Item 3. Parcel Data: (Support)

Utilities

- U4-1 19 = The total number of expected owner expense involvements.
- 2 _____ = The total number of expected State expense involvements; conventional highway (no access control) and no Federal aid for the project.
- 3 _____ = The total number of expected State expense involvements; freeway (access control) and no Federal aid for the project.
- 4 _____ = The total number of expected State expense involvements; conventional highway or freeway and Federal aid for the project.
- U5-7 _____ = The total number of expected utility verifications, which will not result in involvements.
- 8 _____ = The total number of expected utility verifications, anticipating 50% of the verifications will have involvements and 50% will not.
- 9 19 = The total number of expected utility verifications, which will result in involvements.

NOTE: The sum of the U4s must equal the sum of 1/2 of the U5-8s and all of the U5-9s.

Item 7. Are utility facilities or rights of way affected?

☒ Yes ☐ No (If “Yes,” explain.)

Studebaker Rd

SCE has an overhead 66kv electrical line that runs along Studebaker Rd and crosses both the WB 91/NB 605 Connector and WB 91 mainline. Currently there is a power pole approximately 18.5ft away from the connector and another power pole approximately 15.5ft away from the mainline. Due to the widening of both the connector and mainline, we believe these poles and the associated power lines will be impacted. Our resolution is to relocate the two power poles so that necessary clearance requirements are met.

169th St

A joint OH SCE 12kV power and Time Warner Telecom run adjacent to the freeway. Field investigations and measurements have determined that the power pole overhang (Pole #44200073E) will encroach into Caltrans R/W. The pole will need to be relocated further into the private property eliminate the conflict with the overhang.

Pioneer Blvd

Pioneer Blvd contains several utilities within the roadway. Existing gas, sewer, and water facilities will be protected in place or access adjusted to grade as needed. SCE 12kV, Frontier, Time Warner, and Wilcon telecom facilities are within the roadway and are not anticipated to be moved. The Pioneer WB Ramps/168th Alignment Option impacts several homes on 168th St. The power, sewer, and gas services to the residential homes along 168th St will be removed or relocated. Further coordination with these utility owners will need to take place to determine if the utility lines need to be moved into the sidewalk for maintenance purposes or be left in place. **The cost impacts to existing and proposed sewer lines are included in the Project Cost Estimate.**

170th St

The widening of the freeway will encroach upon 170th St and will require the homes along 170th St to be fully taken. There is an overhead electrical line that appears to be serving the existing street light poles. There is also a water line, gas line, and sewer line along 170th St and a portion of Elaine St (up to 169th St) that will need to be removed. **The cost impacts to existing and proposed sewer lines are included in the Project Cost Estimate.**

Norwalk Blvd

There is an overhead electrical line that crosses over the mainline. There is an existing pole approximately 20ft away and may be in conflict with the widening of the SR-91. We are proposing to underground the line under the bridge to eliminate future pole conflicts and clearance issues that may occur. The existing power pole south of the freeway will need additional reinforcement and will also be relocated to provide adequate clearance from the bridge. An existing overhead telecom line runs along Norwalk Blvd that runs underground as it crosses the mainline and will need to be extended to the new power pole location. Near the intersection of Norwalk Blvd and Cuesta Dr, there is an underground electrical line that powers the street lights that will need to be rerouted to accommodate the new location of the street lighting. A 33” underground sewer line crosses SR-91 diagonally from Morning Rain Ave to the back of ABC adult school’s parking lot adjacent to Judy Way. The manhole in the parking lot will be relocated outside of Caltrans R/W to eliminate any conflicts with the proposed improvements and will allow the City of Cerritos to maintain access to the line. The sewer line will need to be adjusted to connect to the new manhole location. **The cost impacts to existing and proposed sewer lines are included in the Project Cost Estimate.**

Bloomfield Ave

Currently, there are underground electricity and telecom lines that run through the Bloomfield Ave OC bridge. The proposed bridge will be a full bridge replacement from the existing bridge. This means that the existing electrical and telecom lines will need to be reestablished within the new bridge. A suspended bridge for temporary overhead lines will be constructed to allow service to be provided during the removal and construction of the Bloomfield Ave OC bridge. There is also a fire hydrant that will need to be relocated to remain operational for future use.

NOTE: The comments mentioned above must be reflected in the number of involvements in U4s and U5s in “Item 3., Parcel Data.”

- Item 14. Indicate the anticipated Right of Way schedule and lead time requirements. (Discuss if the District proposes less than formula lead time and/or if significant pressures for project advancement are anticipated.)

This section is used to discuss the total amount of months you need to complete your work (lead time).

A minimum of 6 months is required for all projects where verifications are needed. If relocations are involved, it is best to request at least 9 months; for tower or other complex relocations, 18 months are needed. (Utility owners can tell you long lead time materials.)

NOTE: It is always a good idea to remind the project engineer that lead time starts for relocation of utilities when they supply adequate plans for requesting relocation plans from utility owners.

- Item 15. Is it anticipated that all Right of Way work will be performed by CALTRANS staff?

☒ Yes ☐ No (If "No," discuss.)

*Evaluations prepared by:

Utilities: Name  Date 6/28/18
Joseph Carbajal, Project Engineer

*The Utility Coordinator must sign and date the R/W Data Sheet.

NOTE: Return the R/W Data Sheet to R/W P&M via the District Utility Coordinator for input into PMCS and forwarding to the project engineer.
